**Total Course Credits** = 48 + 44 + 42 + 46 = **180**
Introduction:

In view of the growing importance of English as a tool for global communication and the consequent emphasis on training the students to acquire communicative competence, the syllabus has been designed to develop linguistic and communicative competence of the students of Engineering.

As far as the detailed Textbooks are concerned, the focus should be on the skills of listening, speaking, reading and writing. The non-detailed Textbooks are meant for extensive reading for pleasure and profit.

Thus the stress in the syllabus in primarily on the development of communicative skills and fostering of ideas.

Objectives:

• To improve the language proficiency of the students in English with emphasis on LSRW skills.
• To enable the students to study and comprehend the prescribed lessons and subjects more effectively relating to their theoretical and practical components.
• To develop the communication skills of the students in both formal and informal situations.

LISTENING SKILLS:
Objectives:

• To enable the students to appreciate the role of listening skill and improve their pronunciation.
• To enable the students to comprehend the speech of people belonging to different backgrounds and regions.
• To enable the students to listen for general content, to fill up information and for specific information.

SPEAKING SKILLS:
Objectives:

• To make the students aware of the importance of speaking for their personal and professional communication.
• To enable the students to express themselves fluently and accurately in social and professional success.
• To help the students describe objects, situations and people.
• To make the students participate in group activities like roleplays, discussions and debates.
• To make the students participate in Just a Minute talks.
READING SKILLS:
Objectives:
- To enable the students to comprehend a text through silent reading.
- To enable the students to guess the meanings of words, messages and inferences of texts in given contexts.
- To enable the students to skim and scan a text.
- To enable the students to identify the topic sentence.
- To enable the students to identify discourse features.
- To enable the students to make intensive and extensive reading.

WRITING SKILLS:
Objectives:
- To make the students understand that writing is an exact formal skill.
- To enable the students to write sentences and paragraphs.
- To make the students identify and use appropriate vocabulary.
- To enable the students to narrate and describe.
- To enable the students capable of note-making.
- To enable the students to write coherently and cohesively.
- To make the students to write formal and informal letters.
- To enable the students to describe graphs using expressions of comparison.
- To enable the students to write technical reports.

Methodology:
- The classes are to be learner-centered where the learners are to read the texts to get a comprehensive idea of those texts on their own with the help of the peer group and the teacher.
- Integrated skill development methodology has to be adopted with focus on individual language skills as per the tasks/exercise.
- The tasks/exercises at the end of each unit should be completed by the learners only and the teacher interventionis permitted as per the complexity of the task/exercise.
- The teacher is expected to use supplementary material wherever necessary and also generate activities/tasks as per the requirement.
- The teacher is permitted to use lecture method when a completely new concept is introduced in the class.

Assessment Procedure:
Theory
- The formative and summative assessment procedures are to be adopted (mid exams and end semester examination).
- Neither the formative nor summative assessment procedures should test the memory of the content of the texts given in the textbook. The themes and global comprehension of the units in the present day context with application of the language skills learnt in the unit are to be tested.
- Only new unseen passages are to be given to test reading skills of the learners. Written skills are to be tested from sentence level to essay level. The communication formats—emails, letters and reports— are to be tested along with appropriate language and expressions.
Examinations:
1. I mid exam + II mid exam (15% for descriptive tests + 10% for online tests) = 25%
2. (80% for the best of two and 20% for the other)
   1. Assignments = 5%
   3. End semester exams = 70%

Three take home assignments are to be given to the learners where they will have to read texts from the reference books list or other sources and write their gist in their own words.

The following text books are recommended for study in I B.Tech I Semester (Common for all branches) and I B.Pharm. I Sem. of JNTU Kakinada from the academic year 2016-17. (R-16 Regulations)

Detailed Textbook:
1. English for Engineers and Technologists, Published by Orient Blackswan Pvt Ltd.

Non-detailed Textbook:
1. PANORAMA: A COURSE ON READING, Published by Oxford University Press India.

The course content along with the study material is divided into six units.

UNIT-I:
1. 'Human Resources' from English for Engineers and Technologists.
   **Objective:**
   To develop human resources to serve the society in different ways.
   **Outcome:**
   The lesson motivates the readers to develop their knowledge different fields and serve the society accordingly.
2. 'An Ideal Family' from Panorama: A Course on Reading
   **Objective:**
   To develop extensive reading skill and comprehension for pleasure and profit.
   **Outcome:**
   Acquisition of writing skills

UNIT-II:
1. 'Transport: Problems and Solutions' from English for Engineers and Technologists.
   **Objective:**
   To highlight road safety measures whatever be the mode of transport.
   **Outcome:**
   The lesson motivates the public to adopt road safety measures.
2. 'War' from 'Panorama: A Course on Reading'
   **Objective:**
   To develop extensive reading skill and comprehension for pleasure and profit.
   **Outcome:**
   Acquisition of writing skills

UNIT-III:
1. 'Evaluating Technology' from English for Engineers and Technologists.
   **Objective:**
   To highlight the advantages and disadvantages of technology.
Outcome:
The lesson creates an awareness in the readers that mass production is ultimately detrimental to biological survival.

2. 'The Verger' from 'Panorama: A Course on Reading'

Objective:
To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:
Acquisition of writing skills

UNIT-IV:
1. 'Alternative Sources of Energy' from English for Engineers and Technologists.

Objective:
To bring into focus different sources of energy as alternatives to the depleting sources.

Outcome:
The lesson helps to choose a source of energy suitable for rural India.

2. 'The Scarecrow' from Panorama: A Course on Reading

Objective:
To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:
Acquisition of writing skills

UNIT-V:
1. 'Our Living Environment' from English for Engineers and Technologists.

Objective:
To highlight the fact that animals must be preserved because animal life is precious.

Outcome:
The lesson creates an awareness in the reader as to the usefulness of animals for the human society.

2. 'A Village Host to Nation' from Panorama: A Course on Reading

Objective:
To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:
Acquisition of writing skills

UNIT-VI:
1. 'Safety and Training' from English for Engineers and Technologists.

Objective:
To highlight the possibility of accidents in laboratories, industries and other places and to follow safety measures.

Outcome:
The lesson helps in identifying safety measures against different varieties of accidents at home and in the workplace.

2. 'Martin Luther King and Africa' from Panorama: A Course on Reading

Objective:
To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:
Acquisition of writing skills.
Note:
All the exercises given in the prescribed lessons in both detailed and non-detailed textbooks relating to the theme and language skills must be covered.

Overall course Outcomes:
- Using English languages, both written and spoken, competently and correctly.
- Improving comprehension and fluency of speech.
- Gaining confidence in using English in verbal situations.

MODEL QUESTION PAPER FOR THEORY

PART- I
Six short answer questions on 6 unit themes

One question on eliciting student's response to any of the themes

PART-II
Each question should be from one unit and the last question can be a combination of two or more units.

Each question should have 3 sub questions: A, B & C

A will be from the main text: 5 marks
B from non-detailed text: 3 marks
C on grammar and Vocabulary: 6 marks
Learning Objectives:

- The course is designed to equip the students with the necessary mathematical skills and techniques that are essential for an engineering course.
- The skills derived from the course will help the student from a necessary base to develop analytic and design concepts.

UNIT-I:
Differential equations of first order and first degree: Linear-Bernoulli-Exact-Reducible to exact.

UNIT-II:
Linear differential equations of higher order: Non-homogeneous equations of higher order with constant coefficients with RHS term of the type $e^{ax}$, $\sin ax$, $\cos ax$, polynomials in $x$, $e^{ax}V(x)$, $xV(x)$- Method of Variation of parameters.
Applications: LCR circuit, Simple Harmonic motion.

UNIT-III:
Laplace transforms: Laplace transforms of standard functions-Shifting theorems - Transforms of derivatives and integrals – Unit step function –Dirac’s delta function- Inverse Laplace transforms– Convolution theorem (without proof).
Applications: Solving ordinary differential equations (initial value problems) using Laplace transforms.

UNIT-IV:
Applications: Maxima and Minima of functions of two variables without constraints and Lagrange’s method (with constraints).

UNIT-V:
UNIT-VI:

Higher order Partial differential equations: Solutions of Linear Partial differential equations with constant coefficients. RHS term of the type $e^{ax+by}, \sin(ax+by), \cos(ax+by), x^m y^n$. Classification of second order partial differential equations.

Outcomes:
At the end of the course, student will be able to:
- Solve linear differential equations of first, second and higher order.
- Determine Laplace transform and inverse Laplace transform of various functions and use Laplace transforms to determine general solution to linear ODE.
- Calculate total derivative, Jocobian and minima of functions of two variables.

Text Books:

Reference Books:
Knowledge of basic concepts of chemistry for engineering students will help them as professional engineers later in design and material selection, as well as utilizing the available resources.

Learning Objectives:

- Plastics are nowadays used in household appliances; also they are used as composites (FRP) in aerospace and automotive industries.
- Fuels as a source of energy are a basic need of any industry, particularly industries like thermal power stations, steel industry, fertilizer industry etc., and hence they are introduced.
- The basics for the construction of galvanic cells are introduced. Also if corrosion is to be controlled, one has to understand the mechanism of corrosion which itself is explained by electrochemical theory.
- With the increase in demand, a wide variety of materials are coming up; some of them have excellent engineering properties and a few of these materials are introduced.
- Water is a basic material in almost all the industries, more so where steam is generated and also where it is supplied for drinking purposes.
- Materials used in major industries like steel industry, metallurgical industries and construction industries and electrical equipment manufacturing industries are introduced. Also lubrication is introduced.

UNIT-I: HIGH POLYMERS AND PLASTICS:

Polymerisation:- Introduction- Mechanism of polymerization - Stereo regular polymers – Methods of polymerization (emulsion and suspension) -Physical and mechanical properties – Plastics as engineering materials:advantages and limitations – Thermoplastics and Thermosetting plastics – Compounding and fabrication (4/5 techniques)- Preparation, properties and applications of polyethene, PVC, Bakelite Teflon and Polycarbonates

Elastomers:Natural rubber- compounding and vulcanization – Synthetic rubbers: Buna S, Buna N, Thiokol and polyurethanes – Applications of elastomers.

UNIT-II: FUEL TECHNOLOGY

Explosives:Rocket fuels
UNIT-III: ELECTROCHEMICAL CELLS AND CORROSION
Galvanic cells - Reversible and irreversible cells – Single electrode potential – Electro chemical series and uses of this series- Standard electrodes (Hydrogen and Calomel electrodes) - Concentration Cells – Batteries: Dry Cell - Ni-Cd cells - Ni-Metal hydride cells - Li cells - Zinc – air cells.
Corrosion :- Definition – Theories of Corrosion (chemical & electrochemical) – Formation of galvanic cells by different metals, by concentration cells, by differential aeration and waterline corrosion – Passivity of metals – Pitting corrosion - Galvanic series – Factors which influence the rate of corrosion - Protection from corrosion – Design and material selection – Cathodic protection - Protective coatings: – Surface preparation – Metallic (cathodic and anodic) coatings - Methods of application on metals (Galvanizing, Tinning, Electroplating, Electroless plating).

UNIT-IV: CHEMISTRY OF ADVANCED MATERIALS
Liquid crystals:- Introduction – Types – Applications
Super conductors:-Type –I, Type II – Characteristics and applications
Green synthesis:- Principles - 3 or 4 methods of synthesis with examples – R₄M₄ principles

UNIT-V: WATER TECHNOLOGY

UNIT-VI: CHEMISTRY OF ENGINEERING MATERIALS AND FUEL CELLS
Refractories: - Definition, Characteristics, Classification, Properties, Failure of refractories.
Lubricants: - Definition, function, Theory and mechanism of lubricants, Properties (Definition and importance).
Cement: - Constituents, Manufacturing, Hardening and setting, Deterioration of cement.
Insulators: - Thermal and electrical insulators.

Outcome:
- The advantages and limitations of plastic materials and their use in design would be understood. Fuels which are used commonly and their economics, advantages and limitations are discussed. Reasons for corrosion and some methods of corrosion control would be understood. The students would be now aware of materials like nano materials and fullerenes and their uses. Similarly liquid crystals and superconductors are understood. The importance of green synthesis is well understood and how they are different from conventional methods is also explained. The impurities present in raw water, problems associated with them and how to avoid them are understood. The advantages and limitations of plastic materials and their use in design would be understood. The commonly used industrial materials are introduced.
Standard Text Books:
1. Engineering Chemistry, Jain and Jain; DhanpatRaiPublicating Co.

Reference Books:
Learning Objectives:

- The students completing this course are expected to understand the concepts of forces and its resolution in different planes, resultant of force system, Forces acting on a body, their free body diagrams using graphical methods.
- They are required to understand the concepts of centre of gravity and moments of inertia and their application, Analysis of frames and trusses, different types of motion, friction and application of work-energy method.

UNIT–I:
Objectives: The students are to be exposed to the concepts of force and friction, direction and its application.
Friction: Introduction, Limiting friction and impending motion, Coulomb’s laws of dry friction, Coefficient of friction, Cone of friction.

UNIT-II:
Objectives: The students are to be exposed to application of free body diagrams. Solution to problems using graphical methods and law of triangle of forces.
Equilibrium of Systems of Forces: Free body diagrams, Equations of equilibrium of coplanar systems, Spatial systems for concurrent forces, LamisTheorm, Graphical method for the equilibrium of coplanar forces, Converse of the law of triangle of forces, Converse of the law of polygon of forces condition of equilibrium, Analysis of plane trusses.

UNIT-III:
Objectives: The students are to be exposed to concepts of centre of gravity.
Centroid: Centroids of simple figures (from basic principles) – Centroids of composite figures
Centre of Gravity: Centre of gravity of simple body (from basic principles), Centre of gravity of composite bodies, Pappus theorems.

UNIT-IV:
Objective: The students are to be exposed to concepts of moment of inertia and polar moment of inertia including transfer methods and their applications.
Area moments of Inertia: Definition – Polar moment of inertia, Transfer theorem, Moments of inertia of composite figures, Products of inertia, Transfer formula for product of inertia.
Mass Moment of Inertia: Moment of inertia of masses, Transfer formula for mass moments of Inertia, Mass moment of inertia of composite bodies.

UNIT-V:
Objectives: The students are to be exposed to motion in straight line and in curvilinear paths, its velocity and acceleration computation and methods of representing plane motion.
Kinematics: Rectilinear and Curvilinear motions – Velocity and Acceleration – Motion of rigid body – Types and their analysis in planar motion.

UNIT-VI:
Objectives: The students are to be exposed to concepts of work, energy and particle motion

Text Books:

References Books:
Learning objectives:
Formulating algorithmic solutions to problems and implementing algorithms in C.

- Notion of operation of a CPU, Notion of an algorithm and computational procedure, editing and executing programs in Linux.
- Understanding branching, iteration and data representation using arrays.
- Modular programming and recursive solution formulation.
- Understanding pointers and dynamic memory allocation.
- Understanding miscellaneous aspects of C.
- Comprehension of file operations.

UNIT-I:

UNIT-II:
Introduction to C Programming- Identifiers, The main () Function, The printf () Function.
Assignment - Implicit Type Conversions, Explicit Type Conversions (Casts), Assignment Variations, Mathematical Library Functions, Interactive Input, Formatted Output, Format Modifiers.

UNIT -III:
Control Flow-Relational Expressions - Logical Operators:
Selection: if-else Statement, nested if, examples, Multi-way selection: switch, else-if, examples.
UNIT-IV:
**Modular Programming:** Function and Parameter Declarations, Returning a Value, Functions with Empty Parameter Lists, Variable Scope, Variable Storage Class, Local Variable Storage Classes, Global Variable Storage Classes, Pass by Reference, Passing Addresses to a Function, Storing Addresses, Using Addresses, Declaring and Using Pointers, Passing Addresses to a Function.

Case Study: Swapping Values, Recursion - Mathematical Recursion, Recursion versus Iteration.

UNIT-V:
**Arrays & Strings:**
- **Arrays:** One-Dimensional Arrays, Input and output of Array Values, Array Initialization, Arrays as Function Arguments, Two-Dimensional Arrays, Larger Dimensional Arrays - Matrices
- **Strings:** String Fundamentals, String Input and Output, String Processing, Library Functions

UNIT-VI:
**Pointers, Structures, Files:**
- **Pointers:** Concept of a Pointer, Initialisation of Pointer Variables, Pointers as function arguments, Passing by Address, Dangling Memory, Address Arithmetic, Character pointers and Functions, Pointers to Pointers, Dynamic Memory Management Functions, Command line arguments.
- **Structures:** Derived types, Structures declaration, Initialization of structures, Accessing structures, Nested structures, Arrays of structures, Structures and functions, Pointers to structures, Self Referential Structures, Unions, Typedef, Bit-fields.
- **Data Files:** Declaring, Opening, and Closing File Streams, Reading from and Writing to Text Files, Random File Access.

Outcomes:
- Understand the basic terminology used in computer programming.
- Write, compile and debug programs in C language.
- Use different data types in a computer program.
- Design programs involving decision structures, loops and functions.
- Explain the difference between call by value and call by reference.
- Understand the dynamics of memory by the use of pointers.
- Use different data structures and create/update basic data files.

Text Books:
3. The C programming Language, Dennis Richie and Brian Kernighan, Pearson Education.

Reference Books:
3. Programming in C, Reema Thareja, OXFORD.
Learning Objectives:
The objectives of the course are to impart:

- Overall understanding of the natural resources.
- Basic understanding of the ecosystem and its diversity.
- Acquaintance on various environmental challenges induced due to unplanned anthropogenic activities.
- An understanding of the environmental impact of developmental activities.
- Awareness on the social issues, environmental legislation and global treaties.

UNIT-I:
**Multidisciplinary nature of Environmental Studies:** Definition, Scope and Importance – Sustainability: Stockholm and Rio Summit–Global Environmental Challenges: Global warming and climate change, acid rains, ozone layer depletion, population growth and explosion, effects; Role of information technology in environment and human health.

**Ecosystems:** Concept of an ecosystem. - Structure and function of an ecosystem; Producers, consumers and decomposers. - Energy flow in the ecosystem - Ecological succession. - Food chains, food webs and ecological pyramids; Introduction, types, characteristic features, structure and function of Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems.

UNIT-II:
**Natural Resources:** Natural resources and associated problems.
Forest resources: Use and over – exploitation, deforestation – Timber extraction – Mining, dams and other effects on forest and tribal people.
Water resources: Use and over utilization of surface and ground water – Floods, drought, conflicts over water, dams – benefits and problems.
Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources.
Food resources: World food problems, changes caused by non-agriculture activities-effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity.
Energy resources: Growing energy needs, renewable and non-renewable energy sources use of alternate energy sources.
Land resources: Land as a resource, land degradation, Wasteland reclamation, man induced landslides, soil erosion and desertification; Role of an individual in conservation of natural resources; Equitable use of resources for sustainable lifestyles.

UNIT-III:
**Biodiversity and its conservation:** Definition: genetic, species and ecosystem diversity-classification - Value of biodiversity: consumptive use, productive use, social-Biodiversity at national and local levels. India as a mega-diversity nation - Hot-sports of biodiversity - Threats to biodiversity: habitat loss, man-wildlife conflicts, - Endangered and endemic species of India – Conservation of biodiversity: conservation of biodiversity.
UNIT – IV Environmental Pollution: Definition, Cause, effects and control measures of Air pollution, Water pollution, Soil pollution, Noise pollution, Nuclear hazards. Role of an individual in prevention of pollution. - Pollution case studies, Sustainable Life Studies. Impact of Fire Crackers on Men and his well being.

Solid Waste Management: Sources, Classification, effects and control measures of urban and industrial solid wastes. Consumerism and waste products, Biomedical, Hazardous and e – waste management.

The student should Visit an Industry / Ecosystem and submit a report individually on any issues related to Environmental Studies course and make a power point presentation.

Text Books:
1. Environmental Studies, K. V. S. G. Murali Krishna, VGS Publishers, Vijayawada

Reference:
2. A Textbook of Environmental Studies, Shaashi Chawla, TMH, New Delhi

1. Introduction to Chemistry laboratory – Molarity, Normality, Primary, secondary standard solutions, Volumetric titrations, Quantitative analysis, Qualitative analysis, etc.

2. Trial experiment - Determination of HCl using standard Na₂CO₃ solution.

3. Determination of alkalinity of a sample containing Na₂CO₃ and NaOH.

4. Determination of KMnO₄ using standard Oxalic acid solution.

5. Determination of Ferrous iron using standard K₂Cr₂O₇ solution.

6. Determination of Copper using standard K₂Cr₂O₇ solution.

8. Determination of Copper using standard EDTA solution.

10. Determination of pH of the given sample solution using pH meter.

11. Conductometric titration between strong acid and strong base.

12. Conductometric titration between strong acid and weak base.

13. Potentiometric titration between strong acid and strong base.

14. Potentiometric titration between strong acid and weak base.

15. Determination of Zinc using standard EDTA solution.

16. Determination of Vitamin – C.

Outcomes:
- The students entering into the professional course have practically very little exposure to lab classes. The experiments introduce volumetric analysis; redox titrations with different indicators; EDTA titrations; then they are exposed to a few instrumental methods of chemical analysis. Thus at the end of the lab course, the student is exposed to different methods of chemical analysis and use of some commonly employed instruments. They thus acquire some experimental skills.

Reference Books

PREScribed Lab Manual For Semester I:

'SINTERACT: English Lab Manual for Undergraduate Students' Published by Orient Blackswan Pvt Ltd.

Objectives:
- To enable the students to learn through practice the communication skills of listening, speaking, reading and writing.

Outcome:
- A study of the communicative items in the laboratory will help the students become successful in the competitive world.
- The course content along with the study material is divided into six units.

UNIT-I:
1. WHY study Spoken English?
2. Making Inquiries on the phone, thanking and responding to Thanks
   Practice work.

UNIT-II:
1. Responding to Requests and asking for Directions
   Practice work.

UNIT-III:
1. Asking for Clarifications, Inviting, Expressing Sympathy, Congratulating
2. Apologising, Advising, Suggesting, Agreeing and Disagreeing
   Practice work.

UNIT-IV:
1. Letters and Sounds
   Practice work.

UNIT-V:
1. The Sounds of English
   Practice work.

UNIT-VI:
1. Pronunciation
2. Stress and Intonation
   Practice work.
Assessment Procedure: Laboratory

1. Every lab session (150 minutes) should be handled by not less than two teachers (three would be ideal) where each faculty has to conduct a speaking activity for 20/30 students.
2. The teachers are to assess each learner in the class for not less than 10 speaking activities, each one to be assessed for 10 marks or 10%. The average of 10 day-to-day activity assessments is to be calculated for 10 marks for internal assessment.

The rubric given below has to be filled in for all the students for all activities.

**The rubric to assess the learners:**

<table>
<thead>
<tr>
<th>Body language</th>
<th>Fluency &amp; Audibility</th>
<th>Clarity in Speech</th>
<th>Neutralization of accent</th>
<th>Appropriate Language</th>
<th>Total 10 marks</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gestures &amp; Postures</td>
<td>Eye Contact</td>
<td>Gram mar</td>
<td>Vocabulary &amp; expressions</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- **Lab Assessment: Internal (25 marks)**
  1. Day-to-Day activities: 10 marks
  2. Completing the exercises in the lab manual: 5 marks
  3. Internal test (5 marks written and 5 marks oral)

- **Lab Assessment: External (50 marks)**
  1. Written test: 20 marks (writing a dialogue, note-taking and answering questions on listening to an audio recording.
  2. Oral: Reading aloud a text or a dialogue- 10 marks
  3. Viva-Voce by the external examiner: 20 marks

**Reference Books:**

1. Strengthen your communication skills by Dr M Hari Prasad, DrSalivendraRaju and Dr G Suvarna Lakshmi, Maruti Publications.
2. English for Professionals by Prof Eliah, B.S Publications, Hyderabad.
3. Unlock, Listening and speaking skills 2, Cambridge University Press
4. Spring Board to Success, Orient BlackSwan
5. A Practical Course in effective english speaking skills, PHI
6. Word power made handy, Drshaliniverma, Schand Company
7. Let us hear them speak, JayashreeMohanraj, Sage texts
8. Professional Communication, ArunaKonneru, McGrawhill Education
9. Cornerstone, Developing soft skills, Pearson Education
Learning Objectives:

- Understand the basic concept of C Programming, and its different modules that include conditional and looping expressions, Arrays, Strings, Functions, Pointers, Structures and File programming.
- Acquire knowledge about the basic concept of writing a program.
- Role of constants, variables, identifiers, operators, type conversion and other building blocks of C Language.
- Use of conditional expressions and looping statements to solve problems associated with conditions and repetitions.
- Role of Functions involving the idea of modularity.

Programming:

Exercise – 1: Basics
- What is an OS Command, Familiarization of Editors - vi, Emacs
- Using commands like mkdir, ls, cp, mv, cat, pwd, and man
- C Program to Perform Adding, Subtraction, Multiplication and Division of two numbers From Command line

Exercise – 2: Basic Math
- Write a C Program to Simulate 3 Laws at Motion
- Write a C Program to convert Celsius to Fahrenheit and vice versa

Exercise – 3: Control Flow - I
- Write a C Program to Find Whether the Given Year is a Leap Year or not.
- Write a C Program to Add Digits & Multiplication of a number

Exercise – 4: Control Flow - II
- Write a C Program to Find Whether the Given Number is
  - Prime Number
  - Armstrong Number
- Write a C program to print Floyd Triangle
- Write a C Program to print Pascal Triangle

Exercise – 5: Functions
- Write a C Program demonstrating of parameter passing in Functions and returning values.
- Write a C Program illustrating Fibonacci, Factorial with Recursion without Recursion

Exercise – 6: Control Flow - III
- Write a C Program to make a simple Calculator to Add, Subtract, Multiply or Divide Using switch...case
- Write a C Program to convert decimal to binary and hex (using switch call function the function)
Exercise – 7: Functions – Continued.
Write a C Program to compute the values of sin x and cos x and e^x values using Series expansion. (use factorial function)

Exercise – 8: Arrays
Demonstration of arrays
a) Search-Linear.
b) Sorting-Bubble, Selection.
c) Operations on Matrix.

Exercises – 9: Structures
a) Write a C Program to Store Information of a Movie Using Structure
b) Write a C Program to Store Information Using Structures with Dynamically Memory Allocation
c) Write a C Program to Add Two Complex Numbers by Passing Structure to a Function

Exercise – 10: Arrays and Pointers
a) Write a C Program to Access Elements of an Array Using Pointer
b) Write a C Program to find the sum of numbers with arrays and pointers.

Exercise – 11: Dynamic Memory Allocations
a) Write a C program to find sum of n elements entered by user. To perform this program, allocate memory dynamically using malloc () function.
b) Write a C program to find sum of n elements entered by user. To perform this program, allocate memory dynamically using calloc () function.

Understand the difference between the above two programs

Exercise – 12: Strings
a) Implementation of string manipulation operations with library function.
   i) copy
   ii) concatenate
   iii) length
   iv) compare
b) Implementation of string manipulation operations without library function.
   i) copy
   ii) concatenate
   iii) length
   iv) compare

Exercise -13: Files
a) Write a C programming code to open a file and to print it contents on screen.
b) Write a C program to copy files

Exercise – 14: Files Continued
a) Write a C program merges two files and stores their contents in another file.
b) Write a C program to delete a file.
Outcomes:

- Apply and practice logical ability to solve the problems.
- Understand C programming development environment, compiling, debugging, and linking and executing a program using the development environment.
- Analyzing the complexity of problems, Modularize the problems into small modules and then convert them into programs.
- Understand and apply the in-built functions and customized functions for solving the problems.
- Understand and apply the pointers, memory allocation techniques and use of files for dealing with variety of problems.
- Document and present the algorithms, flowcharts and programs in form of user-manuals.
- Identification of various computer components, Installation of software.

Note:

a) All the Programs must be executed in the Linux Environment. (Mandatory)
b) The Lab record must be a print of the LATEX (.tex) Format.
Introduction:

In view of the growing importance of English as a tool for global communication and the consequent emphasis on training the students to acquire communicative competence, the syllabus has been designed to develop linguistic and communicative competence of the students of Engineering.

As far as the detailed Textbooks are concerned, the focus should be on the skills of listening, speaking, reading and writing. The non-detailed Textbooks are meant for extensive reading for pleasure and profit.

Thus the stress in the syllabus in primarily on the development of communicative skills and fostering of ideas.

Learning Objectives:
• To improve the language proficiency of the students in English with emphasis on LSRW skills.
• To enable the students to study and comprehend the prescribed lessons and subjects more effectively relating to their theoretical and practical components.
• To develop the communication skills of the students in both formal and informal situations.

LISTENING SKILLS:
Objectives:
• To enable the students to appreciate the role of listening skill and improve their pronunciation.
• To enable the students to comprehend the speech of people belonging to different backgrounds and regions.
• To enable the students to listen for general content, to fill up information and for specific information.

SPEAKING SKILLS:
Objectives:
• To make the students aware of the importance of speaking for their personal and professional communication.
• To enable the students to express themselves fluently and accurately in social and professional success.
• To help the students describe objects, situations and people.
• To make the students participate in group activities like role-plays, discussions and debates.
• To make the students participate in Just a Minute talks.
READING SKILLS:
Objectives:
- To enable the students to comprehend a text through silent reading.
- To enable the students to guess the meanings of words, messages and inferences of texts in given contexts.
- To enable the students to skim and scan a text.
- To enable the students to identify the topic sentence.
- To enable the students to identify discourse features.
- To enable the students to make intensive and extensive reading.

WRITING SKILLS:
Objectives:
- To make the students understand that writing is an exact formal skills.
- To enable the students to write sentences and paragraphs.
- To make the students identify and use appropriate vocabulary.
- To enable the students to narrate and describe.
- To enable the students capable of note-making.
- To enable the students to write coherently and cohesively.
- To make the students to write formal and informal letters.
- To enable the students to describe graphs using expressions of comparison.
- To enable the students to write technical reports.

Methodology:
- The classes are to be learner-centered where the learners are to read the texts to get a comprehensive idea of those texts on their own with the help of the peer group and the teacher.
- Integrated skill development methodology has to be adopted with focus on individual language skills as per the tasks/exercise.
- The tasks/exercises at the end of each unit should be completed by the learners only and the teacher interventionis permitted as per the complexity of the task/exercise.
- The teacher is expected to use supplementary material wherever necessary and also generate activities/tasks as per the requirement.
- The teacher is permitted to use lecture method when a completely new concept is introduced in the class.

Assessment Procedure:

Theory
1. The formative and summative assessment procedures are to be adopted (mid exams and end semester examination).
2. Neither the formative nor summative assessment procedures should test the memory of the content of the texts given in the textbook. The themes and global comprehension of the units in the present day context with application of the language skills learnt in the unit are to be tested.
3. Only new unseen passages are to be given to test reading skills of the learners. Written skills are to be tested from sentence level to essay level. The communication formats—emails,letters and reports-- are to be tested along with appropriate language and expressions.
4. Examinations:
   I mid exam + II mid exam (15% for descriptive tests+10% for online tests)= 25%
Assignments= 5%
End semester exams=70%

5. Three take home assignments are to be given to the learners where they will have to read texts from the reference books list or other sources and write their gist in their own words.

The following text books are recommended for study in I B.Tech II Semester (Common for all branches) and I B.Pharm. II Sem of JNTU Kakinada from the academic year 2016-17 (R-16 Regulations)

1. DETAILED TEXTBOOK: ENGLISH ENCOUNTERS Published by Maruthi Publishers.
2. DETAILED NON-DETAIL: THE GREAT INDIAN SCIENTISTS Published by Cengage learning.

The course content along with the study material is divided into six units.

UNIT-I:
1. 'The Greatest Resource- Education' from English Encounters
   **Objective:** Schumacher describes the education system by saying that it was mere training, something more than mere knowledge of facts.
   **Outcome:** The lesson underscores that the ultimate aim of Education is to enhance wisdom.
2. 'A P J Abdul Kalam' from The Great Indian Scientists.
   **Objective:** The lesson highlights Abdul Kalam's contributions to Indian science and the awards he received.
   **Outcome:** Abdul Kalam's simple life and service to the nation inspires the readers to follow in his footsteps.

UNIT-II:
1. 'A Dilemma' from English Encounters
   **Objective:** The lesson centres on the pros and cons of the development of science and technology.
   **Outcome:** The lesson enables the students to promote peaceful co-existence and universal harmony among people and society.
2. 'C V Raman' from The Great Indian Scientists.
   **Objective:** The lesson highlights the dedicated research work of C V Raman and his achievements in Physics.
   **Outcome:** The Achievements of C V Raman are inspiring and exemplary to the readers and all scientists.

UNIT-III:
1. 'Cultural Shock': Adjustments to new Cultural Environments from English Encounters.
   **Objective:** The lesson depicts of the symptoms of Cultural Shock and the aftermath consequences.
   **Outcome:** The lesson imparts the students to manage different cultural shocks due to globalization.
2. 'HomiJehangirBhabha' from The Great Indian Scientists.
   **Objective:** The lesson highlights HomiJehangirBhabha's contributions to Indian nuclear programme as architect.
**Outcome:** The seminal contributions of Homi Jehangir Bhabha to Indian nuclear programme provide an aspiration to the readers to serve the nation and strengthen it.

**UNIT-IV:**
1. 'The Lottery' from English Encounters.
   **Objective:** The lesson highlights insightful commentary on cultural traditions.
   **Outcome:** The theme projects society’s need to re-examine its traditions when they are outdated.
2. 'Jagadish Chandra Bose' from The Great Indian Scientists.
   **Objective:** The lesson gives an account of the unique discoveries and inventions of Jagadish Chandra Bose in Science.
   **Outcome:** The scientific discoveries and inventions of Jagadish Chandra Bose provide inspiration to the readers to make their own contributions to science and technology, and strengthen the nation.

**UNIT-V:**
1. 'The Health Threats of Climate Change' from English Encounters.
   **Objective:** The essay presents several health disorders that spring out due to environmental changes.
   **Outcome:** The lesson offers several inputs to protect environment for the sustainability of the future generations.
2. 'Prafulla Chandra Ray' from The Great Indian Scientists.
   **Objective:** The lesson gives an account of the experiments and discoveries in Pharmaceuticals of Prafulla Chandra Ray.
   **Outcome:** Prafulla Chandra Ray's scientific achievements and patriotic fervour provide inspiration to the reader.

**UNIT-VI:**
1. 'The Chief Software Architect' from English Encounters
   **Objective:** The lesson supports the developments of technology for the betterment of human life.
   **Outcome:** Pupil get inspired by eminent personalities who toiled for the present day advancement of software development.
2. 'Srinivasa Ramanujan' from The Great Indian Scientists.
   **Objective:** The lesson highlights the extraordinary achievements of Srinivasa Ramanujan, a great mathematician and the most romantic figure in mathematics.
   **Outcome:** The lesson provides inspiration to the readers to think and tap their innate talents.

**NOTE:**
All the exercises given in the prescribed lessons in both detailed and non-detailed textbooks relating to the theme and language skills must be covered.
MODEL QUESTION PAPER FOR THEORY

PART- I
Six short answer questions on 6 unit themes

One question on eliciting student's response to any of the themes

PART-II
Each question should be from one unit and the last question can be a combination of two or more units.

Each question should have 3 sub questions: A,B& C

A will be from the main text: 5 marks
B from non-detailed text: 3 marks
C on grammar and Vocabulary: 6 marks
Learning Objectives:
• The course is designed to equip the students with the necessary mathematical skills and techniques that are essential for an engineering course.
• The skills derived from the course will help the student from a necessary base to develop analytic and design concepts.
• Understand the most basic numerical methods to solve simultaneous linear equations.

UNIT-I:
Solution of Algebraic and Transcendental Equations:

UNIT-II:
Interpolation:

UNIT-III:
Numerical Integration and solution of Ordinary Differential equations:
Trapezoidal rule- Simpson’s $1/3^{rd}$ and $3/8^{th}$ rule-Solution of ordinary differential equations by Taylor’s series-Picard’s method of successive approximations-Euler’s method - Runge-Kutta method (second and fourth order).

UNIT-IV:
Fourier Series:
Introduction- Periodic functions – Fourier series of -periodic function - Dirichlet’s conditions – Even and odd functions –Change of interval– Half-range sine and cosine series.

UNIT-V:
Applications of PDE:
Method of separation of Variables- Solution of One dimensional Wave, Heat and two-dimensional Laplace equation.

UNIT-VI:
Fourier Transforms:
Outcomes:
At the end of the course, student will be able to:
- Calculate a root of algebraic and transcendental equations. Explain relation between the finite difference operators.
- Compute interpolating polynomial for the given data.
- Solve ordinary differential equations numerically using Euler’s and RK method.
- Find Fourier series and Fourier transforms for certain functions.
- Identify/classify and solve the different types of partial differential equations.

Text Books:

Reference Books:
1. Advanced engineering mathematics with MATLAB, Dean G. Duffy, CRC Press
Learning Objectives:

- The course is designed to equip the students with the necessary mathematical skills and techniques that are essential for an engineering course.
- The skills derived from the course will help the student from a necessary base to develop analytic and design concepts.
- Understand the most basic numerical methods to solve simultaneous linear equations.

UNIT-I:
**Linear systems of equations:** Rank-Echelon form-Normal form – Solution of linear systems – Gauss elimination - Gauss Jordon- Gauss Jacobi and Gauss Seidal methods.
Applications: Finding the current in electrical circuits.

UNIT-II:
**Eigen values - Eigen vectors and Quadratic forms:** Eigen values - Eigen vectors– Properties – Cayley-Hamilton theorem - Inverse and powers of a matrix by using Cayley-Hamilton theorem- Diagonalization- Quadratic forms- Reduction of quadratic form to canonical form – Rank - Positive, negative and semi definite - Index – Signature.
Applications: Free vibration of a two-mass system.

UNIT-III:
**Multiple integrals:** Curve tracing: Cartesian, Polar and Parametric forms.
Multiple integrals: Double and triple integrals – Change of variables – Change of order of integration.
Applications: Finding Areas and Volumes.

UNIT-IV:
**Special functions:** Beta and Gamma functions- Properties - Relation between Beta and Gamma functions- Evaluation of improper integrals.
Applications: Evaluation of integrals.

UNIT-V:
**Vector Differentiation:** Gradient- Divergence- Curl - Laplacian and second order operators - Vector identities.
Applications: Equation of continuity, potential surfaces

UNIT-VI:
**Vector Integration:** Line integral – Work done – Potential function – Area- Surface and volume integrals Vector integral theorems: Greens, Stokes and Gauss Divergence theorems (without proof) and related problems.
Applications: Work done, Force.
Outcomes:
At the end of the Course, Student will be able to:
- Determine rank, Eigenvalues and Eigen vectors of a given matrix and solve simultaneous linear equations.
- Solve simultaneous linear equations numerically using various matrix methods.
- Determine double integral over a region and triple integral over a volume.
- Calculate gradient of a scalar function, divergence and curl of a vector function. Determine line, surface and volume integrals. Apply Green, Stokes and Gauss divergence theorems to calculate line, surface and volume integrals.

Text Books:

Reference Books:
ENGINEERING PHYSICS
(ME, CE, PE, PCE, MET.E, MINING, AUTOMOBILE, CHEMICAL,AERONAUTICAL, BIO.TECH)

Learning Objectives:
Physics curriculum which is re-oriented to the needs of Circuital branches of graduate engineering courses offered by JNTUK That serves as a transit to understand the branch specific advanced topics. The courses are designed to:

- Impart concepts of Optical Interference, Diffraction and Polarization required to design instruments with higher resolution- Concepts of coherent sources, its realization and utility optical instrumentation.
- Study the Structure-property relationship exhibited by solid crystal materials for their utility.
- Tap the Simple harmonic motion and its adaptability for improved acoustic quality of concert halls.
- To explore the Nuclear Power as a reliable source required to run industries
- To impart the knowledge of materials with characteristic utility in appliances.

UNIT-I:
INTERFERENCE: Principle of Superposition – Coherent Sources – Interference in thin films (reflection geometry) – Newton’s rings – construction and basic principle of Interferometers.

UNIT-II:
DIFFRACTION: Fraunhofer diffraction at single slit cases of double slit, N-slits & Circular Aperture (Qualitative treatment only)-Grating equation - Resolving power of a grating, Telescope and Microscopes.

UNIT-III:
POLARIZATION: Types of Polarization-production - Nicol Prism -Quarter wave plate and Half Wave plate – Working principle of Polarimeter (Sacharimeter)

UNIT-IV:
ACOUSTICS: Reverberation time - Sabine’s formula – Acoustics of concert-hall.
ULTRASONICS: Production - Ultrasonic transducers- Non-Destructive Testing – Applications.

UNIT-V:
CRYSTALLOGRAPHY & X-RAY DIFFRACTION: Basis and lattice – Bravais systems- Symmetry elements- Unit cell- packing fraction – coordination number- Miller indices – Separation between successive (h k l) planes – Bragg’s law.
UNIT-VI:

MAGNETISM: Classification based on Field, Temperature and order/disorder – atomic origin – Ferromagnetism- Hysteresis- applications of magnetic materials (Para & Ferro).

Outcome:
- Construction and working details of instruments, ie., Interferometer, Diffractometer and Polarimeter are learnt. Study Acoustics, crystallography magnetic and dielectric materials enhances the utility aspects of materials.

Text Books:

Reference books:
Learning Objectives:
- The content of this course shall provide the student the basic concepts of various mechanical systems and exposes the student to a wide range of equipment and their utility in a practical situation. It shall provide the fundamental principles of materials, fuels, Steam, I.C. Engines, compressors, hydraulic machines and transmission systems that usually exist in any process plant.

UNIT –I:
Stresses and strains: kinds of – stress-strains, elasticity and plasticity, Hooks law, stress –strain diagrams, modules of elasticity, Poisson’s ratio, linear and volumetric strain, relation between E, N, and K, bars of uniform strength, compound bars and temperature stresses.

UNIT–II:
Types of supports – loads – Shear force and bending moment for cantilever and simply supported beams without overhanging for all types of loads.
Theory of simple bending, simple bending formula, Distribution of Flexural and Shear stress in Beam section – Shear stress formula – Shear stress distribution for some standard sections

UNIT-III:
Thin cylindrical shells: stress in cylindrical shells due to internal pressures, circumferential stress, longitudinal stress, design of thin cylindrical shells, spherical shells, change in dimension of the shell due to internal pressure, change in volume of the shell due to internal pressure.
Thick Cylinders: Lame’s equation- cylinders subjected to inside and outside pressures columns and Struts.

UNIT-IV:
Steam boilers and Reciprocating air compressors: Classification of boilers, essentialities of boilers, selection of different types of boilers, study of boilers, boiler mountings and accessories.
Reciprocating air compressors: uses of compressed air, work done in single stage and two-stage compression, inter cooling and simple problems.

UNIT-V:
Internal combustion engines: classification of IC engines, basic engine components and nomenclature, working principle of engines, Four strokes and two stroke petrol and diesel engines, comparison of CI and SI engines, comparison of four stroke and two stroke engines, simple problems such as indicated power, brake power, friction power, specific fuel consumption, brake thermal efficiency, indicated thermal efficiency and mechanical efficiency.
UNIT-VI:  

Outcomes:  
After completing the course, the student shall be able to determine:  
- The stress/strain of a mechanical component subjected to loading.  
- The performance of components like Boiler, I.C. Engine, Compressor, Steam/Hydraulic turbine, Belt, Rope and Gear.  
- The type of mechanical component suitable for the required power transmission.

Text Books:  

Reference Book:  
Learning Objectives:
• Engineering drawing being the principle method of communication for engineers, the objective is to introduce the students, the techniques of constructing the various types of polygons, curves and scales. The objective is also to visualize and represent the 3D objects in 2D planes with proper dimensioning, scaling etc.

UNIT-I:
Objective: To introduce the students to use drawing instruments and to draw polygons, Engg. Curves.
Polygons: Constructing regular polygons by general methods, inscribing and describing polygons on circles.
Curves: Parabola, Ellipse and Hyperbola by general methods, cycloids, involutes, tangents &normals for the curves.

UNIT-II:
Objective: To introduce the students to use scales and orthographic projections, projections of points & simple lines.
Scales: Plain scales, diagonal scales and vernier scales
Orthographic Projections: Horizontal plane, vertical plane, profile plane, importance of reference lines, projections of points in various quadrants, projections of lines, lines parallel either to of the reference planes (HP,VP or PP)

UNIT-III:
Objective: The objective is to make the students draw the projections of the lines inclined to both the planes.
Projections of straight lines inclined to both the planes, determination of true lengths, angle of inclination and traces- HT, VT

UNIT-IV:
Objective: The objective is to make the students draw the projections of the plane inclined to both the planes.
Projections of planes: regular planes perpendicular/parallel to one plane and inclined to the other reference plane; inclined to both the reference planes.

UNIT-V:
Objective: The objective is to make the students draw the projections of the various types of solids in different positions inclined to one of the planes.
Projections of Solids – Prisms, Pyramids, Cones and Cylinders with the axis inclined to one of the planes.
UNIT-VI:

Objective: The objective is to represent the object in 3D view through isometric views. The student will be able to represent and convert the isometric view to orthographic view and vice versa.
Conversion of isometric views to orthographic views; Conversion of orthographic views to isometric views.

ENGLISH-COMMUNICATION SKILLS LAB-II

PRESCRIBED LAB MANUAL FOR SEMESTER-II:

'INTERACT: English Lab Manual for Undergraduate Students' Published by Orient Blackswan Pvt Ltd.

Objectives:
• To enable the students to learn demonstratively the communication skills of listening, speaking, reading and writing.

Outcome:
• A study of the communicative items in the laboratory will help the students become successful in the competitive world.
• The course content along with the study material is divided into six units.

UNIT-I:
1. Debating
   Practice work

UNIT-II:
1. Group Discussions
   Practice work

UNIT-III:
1. Presentation Skills
   Practice work

UNIT-IV:
1. Interview Skills
   Practice work

UNIT-V:
1. Email,
2. Curriculum Vitae
   Practice work

UNIT-VI:
1. Idiomatic Expressions
2. Common Errors in English
   Practice work
Reference Books:

1. Strengthen your communication skills by Dr M Hari Prasad, Dr SalivendraRaju and Dr G Suvarna Lakshmi, Maruti Publications.
2. English for Professionals by Prof Eliah, B.S Publications, Hyderabad.
4. Spring Board to Success, Orient BlackSwan.
5. A Practical Course in effective english speaking skills, PHI.
6. Word power made handy, Dr Shalini Verma, Schand Company.
7. Let us hear them speak, Jayashree Mohanraj, Sage texts.
9. Cornerstone, Developing soft skills, Pearson Education.
Learning Objective:
• Training field oriented Engineering graduates to handle instruments and their design methods to improve the accuracy of measurements.

LIST OF EXPERIMENTS:
3. Determination of thickness of a spacer using wedge film and parallel interference fringes.
4. Determination of Rigidity modulus of a material- Torsional Pendulum.
7. Verification of laws of vibrations in stretched strings – Sonometer.
9. L- C- R Series Resonance Circuit.
10. Study of I/V Characteristics of Semiconductor diode.
11. I/V characteristics of Zener diode.
13. Magnetic field along the axis of a current carrying coil – Stewart and Gee’s apparatus.
15. Hall Effect in semiconductors.
18. Determination of Young’s modulus by method of single cantilever oscillations.
20. Determination of Planck’s constant using photocell.

Outcome:
• Physics lab curriculum gives fundamental understanding of design of an instrument with targeted accuracy for physical measurements.
Learning Objective:
- Training Engineering students to prepare a technical document and improving their writing skills.

LIST OF EXPERIMENTS
1. Hall Effect
2. Crystal Structure
3. Hysteresis
4. Brewster’s angle
5. Magnetic Levitation / SQUID
6. Numerical Aperture of Optical fiber
7. Photoelectric Effect
8. Simple Harmonic Motion
9. Damped Harmonic Motion
10. LASER – Beam Divergence and Spot size
11. B-H curve
12. Michelson’s interferometer
13. Black body radiation

URL: [www.vlab.co.in](http://www.vlab.co.in)

Outcome:
- Physics Virtual laboratory curriculum in the form of assignment ensures an engineering graduate to prepare a /technical/mini-project/ experimental report with scientific temper.
ENGINEERING WORKSHOP & IT WORKSHOP

ENGINEERING WORKSHOP:

Learning Objective: To impart hands-on practice on basic engineering trades and skills.

Note: At least two exercises to be done from each trade.

Trade:

- **Carpentry**:
  1. T-Lap Joint
  2. Cross Lap Joint
  3. Dovetail Joint
  4. Mortise and Tenon Joint

- **Fitting**:  
  1. Vee Fit  
  2. Square Fit  
  3. Half Round Fit  
  4. Dovetail Fit

- **Black Smithy**:
  1. Round rod to Square  
  2. S-Hook  
  3. Round Rod to Flat Ring  
  4. Round Rod to Square headed bolt

- **House Wiring**:
  1. Parallel / Series Connection of three bulbs  
  2. Stair Case wiring  
  3. Florescent Lamp Fitting  
  4. Measurement of Earth Resistance

- **Tin Smithy**:
  1. Taper Tray  
  2. Square Box without lid  
  3. Open Scoop  
  4. Funnel

IT WORKSHOP:

OBJECTIVES:
- Understand the basic components and peripherals of a computer.
- To become familiar in configuring a system.
- Learn the usage of productivity tools.
- Acquire knowledge about the netiquette and cyber hygiene.
- Get hands on experience in trouble shooting a system?

1. **System Assembling, Disassembling and identification of Parts / Peripherals**

2. **Operating System Installation** - Install Operating Systems like Windows, Linux along with necessary Device Drivers.

3. **MS-Office / Open Office**
   b. **Spread Sheet** - organize data, usage of formula, graphs, charts.
c. **Power point** - features of power point, guidelines for preparing an effective presentation.
d. **Access** - creation of database, validate data.

5. **Internet and World Wide Web** - Search Engines, Types of search engines, netiquette, cyber hygiene.

6. Trouble Shooting - Hardware trouble shooting, Software trouble shooting.

7. **MATLAB** - basic commands, subroutines, graph plotting.

8. **LATEX** - basic formatting, handling equations and images.

**OUTCOMES:**

- Common understanding of concepts, patterns of decentralization implementation in Africa †
- Identified opportunities for coordinated policy responses, capacity building and implementation of best practices †
- Identified instruments for improved decentralization to the local level †
- Identified strategies for overcoming constraints to effective decentralization and sustainable management at different levels

**TEXT BOOKS:**

5. Scott Mueller’s Upgrading and Repairing PCs, 18/e, Scott. Mueller, QUE, Pearson, 2008
7. Comdex Information Technology course tool kit Vikas Gupta, WILEY Dreamtech.
8. Introduction to Information Technology, ITL Education Solutions limited, Pearson Education.

COMPLEX VARIABLES

Learning Objectives:
- The aim of this course is to introduce the special functions, their generating functions and the algebra, geometry and calculus of functions of a complex variable. The emphasis will be on gaining a geometric understanding of complex analytic functions as well as developing computational skills in employing the powerful tools of complex analysis for solving theoretical and applied problems.

UNIT-I:
**Functions of a complex variable:**
Applications: Potential between parallel plates, coaxial cylinders, potential in angular regions.

UNIT-II:
**Elementary functions and Mapping:**
Exponential, trigonometric, hyperbolic functions and their properties – General power \( Z (c \) is complex), principal value.
Applications: Polar plots of sinusoidal transfer function. (Section 7.3 of reference book 5)

UNIT-III:
**Complex integration:**
Line integral – Cauchy’s integral theorem – Cauchy’s integral formula – Generalized integral formula -Liouville Theorem - Morera’s Theorem.
Applications: Circulation along closed curve, conservative fields.

UNIT-IV:
**Power series:**

UNIT-V:
**Evaluation of Integrals:**
Residue – Residue theorem
Application: Types of real integrals:
(a) Improper real integrals \( \int_{-\infty}^{\infty} f(x)dx \)
(b) \( \int_{-\pi}^{\pi} f(\cos \theta, \sin \theta)d\theta \)
(c) \( \int_{-\infty}^{\infty} e^{imx} f(x)dx \)
(d) Integrals by indentation
UNIT -VI:
Transformation by exp z, ln z, $z^2$, $z^n$ (n positive integer), Sin z, Cos z, $z+a/z$, Translation, rotation, inversion and bilinear transformation –fixed point- cross ratio – properties-invariance of circles.
Applications: Mapping theorem (without proof) with application to stability analysis of closed loop systems, Nyquist stability criterion and its Remarks.(Section 7.5 of reference book 5)

Outcomes:
At the end of the course, student will be able to:
- Solve linear differential equations of first, second and higher order.
- Determine Laplace transform and inverse Laplace transform of various functions and use Laplace transforms to determine general solution to linear ODE.
- Calculate total derivative, Jacobian and minima of functions of two variables.

Text Books:

Reference Books:
Learning Objectives:
This is a basic course designed to make the student:

- Learn the basic principles of electrical laws and analysis of networks.
- Understand the principle of operation and construction details of DC machines.
- Understand the principle of operation and construction details of transformer.
- Understand the principle of operation and construction details of alternator and 3-Phase induction motor.
- Study the operation of PN junction diode, half wave, full wave rectifiers and OP-AMPS.
- Learn the operation of PNP and NPN transistors and various amplifiers.

UNIT-I:
**Electrical Circuits:** Basic definitions, Types of network elements, Ohm’s Law, Kirchhoff’s Laws, inductive networks, capacitive networks, series, parallel circuits and star-delta and delta-star transformations.

UNIT-II:
**DC Machines:** Principle of operation of DC generator – emf equation - types – DC motor types –torque equation – applications – three point starter, swinburn’s Test, speed control methods.

UNIT-III:
**Transformers:** Principle of operation of single phase transformers, emf equation, losses, efficiency and regulation.

UNIT-IV:

UNIT-V:
**Rectifiers & Linear ICs:** PN junction diodes, diode applications(Half wave and bridge rectifiers), Characteristics of operation amplifiers (OP-AMP), Application of OP-AMPS(inverting, non-inverting,integrator and differentiator).

UNIT-VI:
**TRANSISTORS:** PNP and NPN junction transistor, transistor as an amplifier, single stage CE Amplifier, frequency response of CE amplifier, concepts of feedback amplifier.
Outcomes:
At the end of the course, the student will be able to:

- Analyze the various electrical networks.
- Understand the operation of DC generators, 3-point starter and conduct the Swinburn’s Test.
- Analyze the performance of transformer.
- Explain the operation of 3-phase alternator and 3-phase induction motors.
- Analyze the operation of half wave, full wave rectifiers and OP-AMPS.
- Explain the single stage CE amplifier and concept of feedback amplifier.

Text Books:

Reference Books:
GENERAL GEOLOGY

II Year  - I Semester

L T P C
4 0 0 3

Learning Objectives:

• This basic course in general geology is designed to train the students to understand the basics of geology, viz: formation of earth, layers of earth, different types of rocks, formation of sedimentary basins and the micro fossils and their relationship to oil and gas.
• It exposes the students to different geological environments relates to petroleum industry.

UNIT-I:
Dimensions of earth, structure, composition and origin of earth-envelops of the Earth- crust, mantle, core. Internal dynamic process- Plate tectonics- Continental drift, Earthquake and Volcanoes, External dynamic process- weathering, erosion and deposition.

UNIT-II:
Fundamental concepts in Geomorphology-geomorphic processes distribution of landforms- drainage patterns- development, Landforms in relation to rocks types, paleochannels, buried channels.

UNIT-III:
Geological work of rivers, wind, ocean, glaciers and the landforms created by them. Identification of different structural features encountered in oil exploration viz: joints, faults, folds, unconformities.

UNIT-IV:
Origin of igneous, sedimentary and metamorphic rocks. Sedimentary structures-petrographic character of conglomerate, sandstone, shale, limestones.

UNIT-V:
Introduction to sedimentary basins and deltaic systems; Topographic maps, Thematic maps, Topographic and Thematic profiles.

UNIT-VI:
Paleontology: Introduction to Paleontology, Fossils and Fossilization.
Micropaleontology - Palynology: Distribution of microfossils- Foraminifera, Radiolaria, Conodonts, Ostracodes, Diatoms; Importance of micro fossils in oil exploration.
Outcomes:
After completion of the course, the students will be able to:

• Discern the dimension of earth structure, composition, origin of earth, formation of earth. It deals essence of scientific studies dealing with the origin, age, structure of the earth and with the evolution, modification, and extinction of various surface and subsurface physical features.
• Understand the land forms as geomorphology, physiography and to gain a better perspective conforming to the present day thinking on the aspects of geology.
• Be impressed by the fact that the subject is not static and will more likely keep his mind open to new ideas.
• Understand the origin of different kinds of igneous, sedimentary, metamorphic rocks that can be understood in terms of their tectonic setting.
• Gain the knowledge on fundamentals of sedimentary basins and paleontology and their significance to the petroleum industry.

Text Books:

Reference Books:
**SURVEYING AND OFFSHORE STRUCTURES**

**Learning Objectives:**
The students will be trained to:
- Demonstrate the principles of surveying for the measurement of distance and angles.
- Explain the concepts of leveling and contouring.
- Introduce the concepts of advanced surveying and implementation in shoreline surveying.
- Demonstrate the principles of sea surveying.
- Introduce the concepts of wave and current data collection.
- Explain various stages of fixed offshore structure in view of the operation.
- Introduce the concept and types of compliant structures.
- Demonstrate the basic terminology and floatation principles of floating structures.

**UNIT–I:**
**Distance and Direction:** Objectives, Principles and classifications of Surveying, chain, tape, Electronic distance measurements, Meriadians Azimuths and Barings, declination, computation of angle.
**Theodolite:** Theodolite, description, uses and adjustments – temporary, Measurement of horizontal and vertical angles, Principles of Electronic Theodolite.

**UNIT–II:**
**Leveling and Contouring:** Concept and Terminology, Temporary- Method of leveling. Characteristics and Uses of contours- Methods of conducting contour surveys and their plotting.

**UNIT–III:**
**Introduction to Advanced Surveying:** Total Station and Global positioning system and Differential GPS.
**Hydrographic surveying:** Introduction- Shoreline Surveys- Sounding Methods (Bathymetry).

**UNIT–IV:**
Subsea surveying and Geomatics, Introduction to the principles of subsea surveying and geomatics is including bathymetry and seismic survey, positioning systems (surface positioning, visual positioning techniques) distance from shore & water depth, Generation of surface waves in oceans, Wave data collection and current data collection.

**UNIT–V:**
Functions of offshore structures, Fixed offshore structures, Types of fixed structures, fabrication, transportation, installation and operation of offshore structures, construction of offshore concrete structures, Definition of compliant structures, Types of complaint structures.

**UNIT–VI:**
Floating structures, basic hydrostatics, centre of gravity, center of buoyancy, displacement, law of floatation, draft, keel, Simpson’s rule for areas and centroids, second moments of area,
moments of inertia, mass moment of inertia, calculation of metacentric height, Stability of floating structures, Definition of neutrally and positively buoyant structures.

**Outcomes:**
After successful completion of the course, the student can understand:
- The basic principles and significance of measurement of distance and direction.
- Horizontal and vertical angles.
- Principles, importance and measurement of angles using Theodolite.
- Concepts and terminology in contour mapping.
- Measurement and to plotting the contour maps.
- Basics of total station and GPS.
- Shore line survey and basics of acoustics, application in the field.
- Basics of sea surveying and bathymetry, importance of bathymetry survey, seismic survey, positioning and wave and current data collection and significance of data collection.
- Types and functions of fixed offshore structures, methodology of fabrication transportation, installation and operation of fixed offshore structures, Significance and types of compliant structures.
- The basic principles of floatation and stability of floating structures.
- Stability criteria of neutrally and positively buoyant structures.

**Text Books for Units I-III:**

**Text Books for Units IV-VI:**
CHEMICAL PROCESS CALCULATIONS

Learning Objectives:
The subject of chemical process calculations is intended to make the students understand mainly the calculations involved in material and energy balances of process units. The students will be trained to:

- Understand and correctly implement unit conversions in process calculations.
- Understand and apply theoretical knowledge towards problem solving.
- Analyze and solve elementary material balances in physical and chemical processes.
- Analyze and solve elementary energy balances in reactive and non-reactive processes.
- Formulate and solve combined material and energy balances.
- Realize the relevance of thermodynamics in process calculations.
- Carry out complex process calculations using MS Excel.

UNIT-I:
Stoichiometric relation: Basis of calculations, Methods of expressing compositions of mixtures and solutions, density and specific gravity, Baume and API gravity scales.
Behavior of Ideal gases: Kinetic theory of gases, Application of ideal gas law, Gaseous mixtures, Gases in chemical reactions.

UNIT-II:
Vapor pressure: Liquefaction and liquid state, vaporization, boiling point, Effect of temperature on vapor pressure, Antoine equation, Vapor pressure plots, Estimation of critical properties, Vapor pressure of immiscible liquids and ideal solutions, Raoult’s law, Non-volatile solutes.

UNIT-III:
Humidity and Saturation: Relative and percentage saturation or dew point, wet bulb and dry bulb temperature, Use of humidity charts for engineering calculations.

UNIT-IV:
Material balances: Tie substance, Yield, Conversion, Processes involving chemical reactions. Material balance calculation involving drying, dissolution and crystallization; Processes involving recycles, bypass and purge.

UNIT-V:
Thermo-chemistry: Calculation and applications of heat of reaction, combustion, formation and neutralization, Kirchoff’s equation, enthalpy concentration change, calculation of theoretical and actual flame temperatures.
UNIT-VI:
Combustion Calculations: Introduction to fuels, Calorific value of fuels, coal, liquid fuels, Gaseous fuels, air requirement and flue gases, Combustion calculations, Incomplete combustion, Material and energy balances, Thermal efficiency calculations.

Outcomes:
A student who successfully completes this course will be able to:

- Learn all background information/charts/datasheets required to carry out process calculations. Some of these are vapor pressure correlations, latent heat correlation, steam tables, psychrometric charts, enthalpy-concentration diagrams etc.,
- Formulate and solve simple and moderately complex process calculations associated to industrially prominent chemical processes and technologies.
- Conceptualize an integrated methodology that encompasses the knowledge in other subjects (Physical Chemistry, Thermodynamics and Mathematics) and MS Excel for a systematic and structured approach towards chemical process calculations.
- Anaylze chemical processes through the power of modeling and computation. These include back-calculation methods, inventory losses and revenue related assessment etc.

Text Books:

Reference Books:
MATERIALS SCIENCE & ENGINEERING

Learning objectives:
This subject is intended to:

• Provide all the technical/engineering inputs to the learner to choose or select suitable materials of construction of chemical/petrochemical process equipment, piping and internals.
• Impart expertise to the material so that it meets the specific life expectancy, by reducing the shutdown frequency.
• Learn the techniques in minimizing equipment breakdown and increasing the on-stream factor.
• To gain knowledge in choosing/selecting the material such that it withstands the severe process operating conditions such as cryogenic, high temperature, high pressure, acidic, basic, stress induced chemical/petrochemical environments keeping view the reliability and safety of the process equipment.

UNIT-I:
Classification of engineering materials, Levels of Structure, Structure-Property relationships in materials, Crystal Geometry and non-crystalline (amorphous) states; Lattice – Bravais lattices, Crystal systems with examples; Lattice co-ordinates, Miller and Miller- Bravais Indices for directions and places: ionic, covalent and metallic solids; Packing factors and packing efficiency, Ligancy and coordination number; Structure determination by Brag’s X-ray diffraction method.

UNIT-II:
Crystal Imperfections-Classification-point defects-Estimation of point defects-Dislocations-classification(edge and screw)-Surface defects-Dislocation motion and its relevance to mechanical and chemical properties – Stress & Strain relationship and diagrams for different materials(metals, non-metals, rubbers and plastics and polymers)-Elastic and plastic deformation-Slip -stress required to move a dislocation; Multiplication of dislocations – Dislocation reactions, Effect on mechanical behavior of materials, Strain hardening/work hardening – Dynamic recovery and recrystallization.

UNIT-III:
Fracture and failure of materials: Ductile fracture analysis-Brittle fracture analysis-Fracture toughness-Ductile-Brittle transition-Fatigue fracture-theory, creep and mechanism – Methods to postpone the failure and fracture of materials and increase the life of the engineering components /structures.

UNIT-IV:
Solid – liquid and solid-solid equilibria for metals and alloys, Phase rule, Phase diagram for pure metals (single component system),alloys (binary systems), Micro structural changes during cooling, Lever rule and its applications, Typical phase diagrams Homogeneous and
heterogeneous systems, formation of Eutectic, Eutectoid mixtures, Non-equilibrium cooling, Binary Systems (phase diagrams) for study: Cu-Ni/Bi-Cd/Pb-Sn/Fe-C/Al-Cu.

UNIT-V:
Materials for chemical and petrochemical industrial process equipment, Effect of alloying on mechanical and chemical behavior of materials, Applications of heat treatment methods for strengthening of engineering materials.
Composite structures and their advantages over conventional materials, Matrix-reinforcement properties and evaluation of strength properties with different orientation of reinforcement, Applications, Nano materials, Synthesis and characterization.

UNIT-VI:
Stability criteria of materials in chemical/petrochemical industrial environments; Corrosion and Oxidation of materials; Basic mechanisms-types of corrosion; Corrosion testing and evaluation; Prevailing methods to combat corrosion; Coatings –metallic non-metallic, passivity, cathodic protection.

Outcomes:
After the course, the students will be to:
- Equipped with knowledge to prepare material selection diagram, evaluation of equipment life and prediction of life of the equipment.
- Acquiring the abilities to carryout reliability studies.
- Ready to carryout equipment failure analysis and propose the remedial measures.

Text Books:

Reference Books:
Any SIX experiments from each section

Section A: Mechanical Engineering Laboratory:

Learning Objectives:
- To impart practical exposure on the performance evaluation methods of various mechanical components like, I.C. Engine, Hydraulic turbine, Hydraulic pump, Air compressor etc. and also understand the various processes that can be performed on a lathe machine.

List of Experiments:
1. Draw the valve timing diagram of a 4-stroke diesel engine and port timing diagram of a 2-stroke petrol engine.
2. Perform load test on a 4-stroke I.C. Engine and draw the performance curves.
3. Pattern design and making – for one casting drawing.
4. Taper turning and thread cutting on a Lathe machine.
5. Performance on an Impulse/Reaction Hydraulic Turbine.
7. Find the volumetric efficiency, isothermal efficiency of an Air compressor.

Outcomes:
- The student will be able to predict the performance of several mechanical components and operate a lathe machine to produce the required job work.

Section B: Electrical Engineering Laboratory:

Learning Objectives:
This course imparts knowledge to the students to:
- Learn the estimation of efficiency of a DC machine as motor & generator.
- Learn the estimation of efficiency of transformer at different load conditions & power factors.
- Study the performance of a 3-Phase induction motor by conducting direct test.
- Pre-determine the regulation of an alternator by Synchronous impedance method.
- Understand the speed control of a DC shunts motor.
- Study the performance of a DC shunts motor by conducting direct test.
The following experiments are required to be conducted as compulsory experiments:

2. OC and SC tests on single phase transformer (Predetermination of efficiency and regulation at given power factors)
3. Brake test on 3-phase Induction motor (Determination of performance characteristics)
4. Regulation of alternator by Synchronous impedance method.
5. Speed control of D.C. Shunt motor by
   a) Armature Voltage control
   b) Field flux control method
6. Brake test on D.C Shunt Motor

Outcomes:
After successful completion of the course, the students will be able to:

- Estimate the efficiency of a DC machine as motor & generator.
- Estimate the efficiency of transformer at different load conditions & power factors.
- Understand the performance of a 3-Phase induction motor by conducting direct test.
- Pre-determine the regulation of an alternator by Synchronous impedance method.
- Control the speed of a DC shunt motor by Field flux control method & Armature Voltage control method.
- Understand the performance characteristics of a DC shunt motor by conducting direct test.

</table>
Learning Objectives:

- The Learning objectives of this paper is to understand the concept and nature of Managerial Economics and its relationship with other disciplines and also to understand the Concept of Demand and Demand forecasting, Production function, Input Output relationship, Cost-Output relationship and Cost-Volume-Profit Analysis.
- To understand the nature of markets, Methods of Pricing in the different market structures and to know the different forms of Business organization and the concept of Business Cycles.
- To learn different Accounting Systems, preparation of Financial Statement and uses of different tools for performance evaluation. Finally, it is also to understand the concept of Capital, Capital Budgeting and the techniques used to evaluate Capital Budgeting proposals.

UNIT-I:
Introduction to Managerial Economics and Demand Analysis:
Definition of Managerial Economics –Scope of Managerial Economics and its relationship with other subjects –Concept of Demand, Types of Demand, Determinants of Demand- Demand schedule, Demand curve, Law of Demand and its limitations- Elasticity of Demand, Types of Elasticity of Demand and Measurement- Demand forecasting and Methods of forecasting, Concept of Supply and Law of Supply.

UNIT–II:
Production and Cost Analyses:
Concept of Production function- Cobb-Douglas Production function- Leontief production function - Law of Variable proportions- Isoquants and Isocosts and choice of least cost factor combination-Concepts of Returns to scale and Economics of scale-Different cost concepts: opportunity costs, explicit and implicit costs- Fixed costs, Variable Costs and Total costs –Cost – Volume-Profit analysis-Determination of Breakeven point(simple problems)-Managerial significance and limitations of Breakeven point.

UNIT-III:

UNIT-IV:

UNIT-V:
UNIT-VI:
Capital and Capital Budgeting: Capital Budgeting: Meaning of Capital-Capitalization-
Meaning of Capital Budgeting-Time value of money- Methods of appraising Project
profitability: Traditional Methods(payback period, accounting rate of return) and modern
methods(Discounted cash flow method, Net Present Value method, Internal Rate of Return
Method and Profitability Index).

Outcomes:
• The Learner is equipped with the knowledge of estimating the Demand and demand
elasticities for a product and the knowledge of understanding of the Input-Output-Cost
relationships and estimation of the least cost combination of inputs.
• One is also ready to understand the nature of different markets and Price Output
determination under various market conditions and also to have the knowledge of
different Business Units.
• The Learner is able to prepare Financial Statements and the usage of various Accounting
tools for Analysis and to evaluate various investment project proposals with the help of
capital budgeting techniques for decision making.

Text books:
1. Managerial Economics and Financial Analysis, Dr. N. AppaRao, Dr. P. Vijay Kumar,
3. Managerial Economics and Financial Analysis, Prof. J.V.Prabhakararao, Prof. P.
   Venkatarao. Ravindra Publication.

Reference books:
1. Managerial Economics & Financial Analysis, Dr. B. Kuberudu and Dr. T. V. Ramana:
**PROBABILITY & STATISTICS**

**Course Objectives:** To acquaint students with the fundamental concepts of probability and statistics and to develop an understanding of the role of statistics in engineering. Also to introduce numerical techniques to solve the real world applications.

**Course Outcomes: At the end of the Course, Student will be able to:**

1. Examine, analyze, and compare various Probability distributions for both discrete and continuous random variables.
2. Describe and compute confidence intervals for the mean of a population.
3. Describe and compute confidence intervals for the proportion and the variance of a population and test the hypothesis concerning mean, proportion and variance and perform ANOVA test.
4. Fit a curve to the numerical data.

**UNIT I: Discrete Random variables and Distributions:**
Introduction-Random variables- Discrete Random variable-Distribution function- Expectation-Moment Generating function-Moments and properties.
Discrete distributions: Binomial, Poisson and Geometric distributions and their fitting to data.

**UNIT II: Continuous Random variable and distributions:**
Introduction-Continuous Random variable-Distribution function- Expectation-Moment Generating function-Moments and properties.
Continuous distribution: Uniform, Exponential and Normal distributions, Normal approximation to Binomial distribution - Weibull, Gamma distribution.

**UNIT III: Sampling Theory:**
Introduction - Population and samples- Sampling distribution of means (σ known)-Central limit theorem- t-distribution- Sampling distribution of means (σ unknown)- Sampling distribution of variances - $\chi^2$ and F-distributions- Point estimation- Maximum error of estimate - Interval estimation.

**UNIT IV: Tests of Hypothesis:**
Introduction –Hypothesis-Null and Alternative Hypothesis- Type I and Type II errors –Level of significance - One tail and two-tail tests- Tests concerning one mean and proportion, two means-Proportions and their differences- ANOVA for one-way and two-way classified data.

**UNIT V: Curve fitting and Correlation:**
Introduction - Fitting a straight line –Second degree curve-exponential curve-power curve by method of least squares-Goodness of fit.
Correlation and Regression – Properties.
UNIT VI: Statistical Quality Control Methods:

Text Books:

Reference Books:

2. William Menden Hall, Robert J. Bever and Barbara Bever, Introduction to probability and statistics, Cengage learning, 2009
Learning Objectives:
This course involves the fundamentals of fluid flow by including both theory and the applications of fluid flow in chemical engineering. Basic concepts of fluid mechanics will be taught to make the students to:

- Understand basic concepts associated to fluid flow such as viscosity, shear, Newtonian and non-Newtonian fluids etc.
- Learn and apply continuity and Navier Stokes equations as fundamental equations for the analysis of chemical processes.
- Learn and apply the concept of boundary layer theory and governing mathematical equations for Newtonian and non-Newtonian fluid flows.
- Learn and apply Bernoulli’s equation for various simple and complex cases of fluid flow.
- Understand the basic differences between compressible and incompressible fluid flows and suitably adapt, modify and apply suitable correlations for compressible fluid flows.
- Have sound knowledge with respect to various important fluid flows related machinery and equipment. Emphasis shall be towards various types of pumps, compressors and blowers.
- Master the relevant theory for the application of fluid flow past solid surfaces. Emphasis is towards drag and pressure drop correlations for packed and fluidized beds.
- Understand various accessories required for fluid flow such as fittings and valves and their relevance towards variation in pressure drop correlations.
- Understand the knowledge related to various fluid flow measuring devices (Venturi, Orifice, Rotameter and PitotTube).

UNIT-I:
Basic concepts of dimensional analysis, Nature of fluids, Hydrostatic equilibrium, Applications of fluid statics.
Fluid flow phenomena-Laminar flow, Shear rate, Shear stress, Rheological properties of fluids, Turbulence, Boundary layers.

UNIT-II:
Basic equation of fluid flow –Mass balance in a flowing fluid; continuity, differential momentum balance; Equations of motion, macroscopic momentum balances, Mechanical energy equations, Invisid flow: concepts of Source, sink, vortex, flow over a solid sphere/cylinder, Superposition of flows: Concept of flow separation.

UNIT-III:
Incompressible Newtonian/Non-Newtonian flow in pipes and channels- Shear stress and skin friction in pipes, laminar flow in pipes and channels, Turbulent flow in pipes and channels, Friction from changes in velocity or direction, Losses in pipes.
UNIT-IV:
Flow of compressible fluids- Definitions and basic equations, Processes of compressible flow, Isentropic flow through nozzles, Adiabatic frictional flow and Isothermal frictional flow.

UNIT-V:
Flow past immersed bodies, Drag and Drag coefficient, Flow through beds of solids, Motion of particles through fluids.
Fluidization, Conditions for fluidization, Minimum fluidization velocity, Types of fluidization, Expansion of fluidized bed, Applications of fluidization, Continuous fluidization, Slurry and pneumatic transport.

UNIT-VI:
Transportation and Metering of fluids- Pipes, fittings and valves, Pumps: positive displacement pumps, and centrifugal pumps, fans, blowers, and compressors; Measurement of flowing fluids: full bore meters, insertion meters.

Outcomes:
By mastering the fluid mechanics course, the student shall be able to:
• Analyze fluid flow in circular and non-circular conduits.
• Do calculations associated to the estimation of friction factor and pressure drop in circular conduits.
• Do calculations involving Bernoulli’s equation for the transport of acidic, alkaline, hydrocarbon and miscellaneous incompressible fluids in pipelines.
• Calculate the pressure drops and energy requirements associated to compressible fluid flow in circular and rectangular ducts.
• Estimate pressure drop in packed and fluidized beds.
• Rigorously carry out various calculations associated to fluid flow in various types of pumps, fans and blowers.
• Calculate, analyze and calibrate various flow measuring devices.

Text Books:

Reference Books:
PETROLEUM GEOLOGY

Learning Objectives:
- This is a basic course in petroleum geology. The students will be exposed to different source, reservoir and cap-rocks, characterization of reservoir rocks, classification of reservoir porespace, permeability, migration and entrapment, temperature-pressure conditions for the generation of oil and gas from sediments.

UNIT-I:
Source Rocks: Definition of source rock, Organic rich sediments as source rocks, Nature and type of source rocks - Claystone / shale, The process of diagenesis, catagenesis and metagenesis in the formation of source rocks, Evaluation of petroleum source rock potential, Limestone as source rocks, Subsurface pressure temperature conditions for the generation of oil and gas from the source sediments, Oil window.

UNIT-II:
Reservoir Rocks: Characteristics of Reservoir rocks, Classification and nomenclature: Clastic Reservoir Rocks, Carbonate Reservoir Rocks, Unconventional, Fractured and Miscellaneous reservoir rocks, Marine and non-marine reservoir rocks, Concept of Shale oil.

UNIT-III:
Reservoir Properties and Cap Rocks: Reservoir pore space, porosity- primary and secondary porosity, effective porosity, fracture porosity - permeability – effective and relative permeability relationship between porosity, permeability and texture. Cap rocks: Definition and characteristics of cap rocks.

UNIT-IV:
Hydrocarbon migration: Geological framework of migration and accumulation, The concept of hydrocarbon migration from source beds to the carrier beds, Carrier beds to the reservoir, Free-path ways for migration, Short distance and long distance migration, Evidence for migration, Oil and gas seepages.

UNIT-V:
Entrapment of hydrocarbons: Entrapment and accumulation of hydrocarbons, Classification and types of traps: Structural, stratigraphic and combination type of traps, Traps associated with salt domes.

UNIT-VI:
Sedimentary Basins: Sedimentary basins - origin and classification, Types of basins and their relationship to hydrocarbon prospects, Tectonic classification, stratigraphic evolution and hydrocarbon accumulations of the following basins: Krishna-Godavari basin, Cambay basin and Mumbai off-shore.
Outcomes:
After successful completion of the course, the students are expected to:

- Identify different source rocks from which hydrocarbons are generated.
- Discern about origin of source rocks, formation of good source rocks, different characterization of reservoir rocks, classification, nomenclature and different source of reservoir rocks, pore space, porosity and its types.
- Gain knowledge of how and why fluid hydrocarbons migrate from a source rock to reservoir rock, entrapment and accumulation of hydrocarbons.
- Do tectonic classification, stratigraphy evaluation and hydrocarbon accumulation of KG basin, Cambay basin and Mumbai off-shore.

Text Book:

Reference Books:
2. Sedimentary basins of India- ONGC bulleting.
Learning Objectives:
This course is designed to make the students:
- Understand zeroth, first and second laws of thermodynamics.
- Discern various thermodynamic properties such as internal energy, specific volume, enthalpy, entropy, specific heat etc. from fundamental correlations.
- Learn the application of various thermodynamic laws for the analysis of chemical processes.
- Understand the concept and models of residual and excess Gibbs energy and the associated calculations for VLE, VLLE, SVE and SLE.
- Learn the application of the laws of thermodynamics for hydrocarbon (both liquid and gas) characterization, handling, storage and transport.

UNIT-I:
Introduction: The scope of thermodynamics, defined quantities; temperature, volume, pressure, work, energy, heat, Joules Experiments, SI units.  
The first law and other basic concepts: The first law of thermodynamics, thermodynamic state and state functions, enthalpy, The steady-state steady flow process, Equilibrium, The reversible process, constant-V and constant- P processes, heat capacity.

UNIT-II:
Volumetric properties of pure fluids: The PVT behavior of pure substances, virial equations, the ideal gas, the applications of the virial equations, Cubic equations of state, generalized correlations for gases.

UNIT-III:
The second law of thermodynamics: Statements of the second law, heat engines, thermodynamic temperature scales, thermodynamic temperature and the ideal-gas scale, Entropy, Entropy changes of an ideal gas, mathematical statement of the second law, the third law of thermodynamics. Mollier diagram and steam tables.

UNIT-IV:
Thermodynamic properties of fluids: Property relations for homogeneous phases, Residual properties, Generalized property correlations for gases.  
Thermodynamics of flow processes; Principles of conservation of mass and energy for flow systems, Analysis of expansion processes; turbines, throttling; compression processes – compressors and pumps; Calculation of ideal work and last work, Examples on hydrocarbons and natural gas.

UNIT-V:
Solution thermodynamics: Basic concepts of chemical potential, Phase equilibria, partial properties, fugacity coefficient, residual and excess Gibbs free energy, Correlations for the estimation of fugacity coefficient, Residual and excess Gibbs energy in vapor liquid equilibria.
UNIT-VI:

Phase Equilibria: Gamma/Phi formulation of VLE, VLE from Virial equations of state and cubic equations of state, Introduction to Vapor–Liquid–Liquid equilibrium (VLLE), Solid–Liquid equilibrium (SLE) and Solid–Vapor equilibrium (SVE), Equilibrium adsorption of gases on solids.

Outcomes:
After completion of the course, the students shall be able to:

- Become conversant with all the basic concepts of thermodynamics and gain working knowledge in open, closed, isothermal, isobaric and isoentropic processes.
- Use thermodynamic tables and diagrams for the estimation of internal energy, specific volume, enthalpy and entropy.
- Apply equations such as ideal gas law, Vander Waal’s equation and other cubic equations of state for the characterization of chemical process parameters.
- Determine efficiencies of turbines, pumps, compressors, blowers and nozzles.
- Rigorously use residual and excess Gibbs free energy models for design of oil and natural gas processing systems.

Text Book:

Reference Books:
Learning Objectives:

- This course is designed to introduce a basic study of the phenomena of heat transfer to carry out thermal design/heat transfer process design for heat exchange systems such as process heat exchangers, reboilers, air/utility coolers/condensers, furnaces, boilers, super-heaters, evaporators, driers, cooling towers etc. The principles involve the estimation of overall heat transfer coefficients, heat transfer surface area, pressure drop involved in single-phase and multi-phase flow regimes.
- The students will be trained to acquire skills to carry out the detailed mechanical design of heat exchangers such as number tubes, selection of shell and tube material, estimate number of baffles and also provide necessary information regarding TEMA classification.

UNIT-I:
**Introduction:** Nature of heat flow, conduction, convection, natural and forced convection, and radiation.

**Heat transfer by conduction in Solids:** Fourier’s law, thermal conductivity, steady state conduction in plane wall & composite walls, compound resistances in series, heat flow through a cylinder, conduction in spheres, thermal contact resistance, plane wall: variable conductivity.

**Unsteady state heat conduction:** Equation for one-dimensional conduction, Semi-infinite solid, finite solid.

UNIT-II:
**Principles of heat flow in fluids:** Typical heat exchange equipment, countercurrent and parallel current flows, energy balances, rate of heat transfer, overall heat transfer coefficient, electrical analogy, critical radius of insulation, logarithmic mean temperature difference, variable overall coefficient, multi-pass exchangers, individual heat transfer coefficients, resistance form of overall coefficient, fouling factors, classification of individual heat transfer coefficients, magnitudes of heat transfer coefficients, effective coefficients for unsteady-state heat transfer.

UNIT-III:
**Heat Transfer to Fluids without Phase change:** Regimes of heat transfer in fluids, thermal boundary layer, heat transfer by forced convection in laminar flow, heat transfer by forced convection in turbulent flow, the transfer of heat by turbulent eddies and analogy between transfer of momentum and heat, heat transfer to liquid metals, heating and cooling of fluids in forced convection outside tubes.

UNIT-IV:
**Natural convection:** Natural convection to air from vertical shapes and horizontal planes, effect of natural convection in laminar flow heat transfer.

**Heat transfer to fluids with phase change:** Heat transfer from condensing vapors, heat transfer to boiling liquids.

UNIT-V:
**Radiation:** Emission of radiation, absorption of radiation by opaque solids, radiation between surfaces, combined heat transfer by conduction, convection and radiation.

**Evaporators:** Types of Evaporators, performance of tubular evaporators, vapor recompression.
UNIT-VI:

Outcomes:
Upon successful completion of this course, the students will be able to:
- Understand the basic laws of heat transfer.
- Account for the consequence of heat transfer in thermal analyses of engineering systems.
- Analyze problems involving steady state heat conduction in simple geometries.
- Develop solutions for transient heat conduction in simple geometries.
- Obtain numerical solutions for conduction and radiation heat transfer problems.
- Understand the fundamentals of convective heat transfer process.
- Evaluate heat transfer coefficients for natural convection.
- Evaluate heat transfer coefficients for forced convection inside ducts.
- Evaluate heat transfer coefficients for forced convection over exterior surfaces.
- Analyze heat exchanger performance by using the method of log mean temperature difference.
- Analyze heat exchanger performance by using the method of heat exchanger effectiveness.
- Calculate radiation heat transfer between black body surfaces as well as grey body surfaces.

Text Books:

Reference Books:
PETROLEUM EXPLORATION

Learning Objectives:
- The syllabus for petroleum exploration should be aimed at the students to have a broad knowledge of exploration history in India. The students should know what are the basic methods which are used in petroleum exploration with special emphasis on gravity/magnetic and more importantly the students should understand in detail about the Seismic methods which are the back bone of the whole gamut of oil exploration.
- At the same time sedimentology and biostratigraphy are also important to understand the sedimentary sequences holding hydrocarbons as the knowledge of these will help in the log interpretation also.

UNIT-I:
Introduction: Overview of petroleum exploration in India, Introduction to Geophysical/Geological methods used in petroleum exploration.

UNIT-II:
Sedimentological and biostratigraphic approaches in hydrocarbon exploration.

UNIT-III:

UNIT-IV:
Basic Concepts of seismic methods: Seismic refraction surveys- Geometry of refracted path, planar interface- Two layer case with horizontal interface- Methodology of refraction profiling- Recording instruments & energy sources- Corrections applied to refraction data Interpretation of refraction data- Application of seismic refraction method.

UNIT-V:
Geometry of reflected ray path: Single horizontal reflector- The reflection seismograph and seismogram (Seismic traces)- Importance of seismic reflection survey over seismic refraction survey technique- Common depth point (CDP) profiling & stacking- 2D, 3D, & 4D seismic surveys- Field procedures & principles- Time corrections applied to seismic data- Data processing - Introduction to 2D & 3D data acquisition & interpretationof reflection data for identification of drillable structures.

UNIT-VI:
Well seismic shooting for velocity determination and Vertical Seismic Profiling (VSP).
Outcomes:

- It gives insight to the students to have a broad based understanding of the seismic exploration, viz its acquisition methods, processing and interpretation, as they have already had geology in II\textsuperscript{nd} year course. The knowledge of these methods will go a long way along with the other subject,i.e, well logging and formation evaluation for them to opt for upstream industry jobs if they so desire.

Text Books:

Reference Books:

MOMENTUM TRANSFER LAB

Learning Objectives:
- Fundamentals of momentum transfer will be demonstrated in a series of laboratory exercises like determination of discharge coefficient of orifice, venturi, notches, friction factors in pipes, pressure drop in packed and fluidized beds, fluid viscosity, characteristics of centrifugal pump, characterization of fluid flow, verification of Bernoulli’s theorem, and measurement of point velocities. Hands-on experience and communication skills will be achieved.

List of Experiments:
1. Identification of laminar and turbulent flows; Major equipment - Reynolds apparatus.
2. Measurement of point velocities; Major equipment - Pitot tube setup.
3. Verification of Bernoulli’s equation; Major equipment – Bernoulli’s Apparatus.
4. Calibration of Rotameter; Major equipment – Rotameter Assembly.
5. Variation of Orifice coefficient with Reynolds Number; Major equipment - Orifice meter Assembly.
6. Determination of Venturi coefficient; Major equipment – Venturi meter Assembly.
7. Friction losses in Fluid flow in pipes; Major equipment - Pipe Assembly with provision for Pressure measurement
8. Pressure drop in a packed bed for different fluid velocities; Major equipment - Packed bed with Pressure drop measurement.
9. Pressure drop and void fraction in a fluidized bed; Major equipment - Fluidized bed with Pressure drop measurement.
10. Studying the coefficient of contraction for a given open orifice; Major equipment - Open Orifice Assembly.
11. Studying the coefficient of discharge in a V-notch; Major equipment - V-notch Assembly.
12. Studying the Characteristics of a centrifugal pump; Major equipment - Centrifugal Pump.
13. Viscosity determination using Stoke’s law; Major equipment–Terminal Velocity determination column.

Outcomes:
After completion of the course, students will be able to do the following:
- Operate fluid flow equipment and instrumentation.
- Collect and analyze data using momentum transfer principles and experimentation methods.
- Prepare reports following accepted writing and graphical techniques.
- Perform exercises in small teams.
- Demonstrate principles discussed in momentum transfer lecture course.
- Demonstrate appropriate work habits consistent with industry standards.
Learning Objectives:
- Fundamentals of process heat transfer will be demonstrated in a series of laboratory exercises like determination of thermal conductivities of composite wall and metal rod, natural convective and forced convective heat transfer coefficients, both film and overall coefficients, Stefan-Boltzman constant, emissivity of a metal plate etc. Students will achieve hands-on experience and acquire communication skills while conducting experiments in a team.

List of Experiments:
1. Determination of total thermal resistance and thermal conductivity of composite wall.
2. Determination of thermal conductivity of a metal rod.
3. Determination of natural convective heat transfer coefficient for a vertical tube.
4. Determination of critical heat flux point for pool boiling of water.
5. Determination of forced convective heat transfer coefficient for air flowing through a pipe.
6. Determination of overall heat transfer coefficient in double pipe heat exchanger.
7. Study of the temperature distribution along the length of a pin-fin under natural and forced convection conditions.
8. Estimation of un-steady state film heat transfer coefficient between the medium in which the body is cooled.
10. Determination of emissivity of a given plate at various temperatures.

Outcomes:
Upon successful completion of this lab course, the students will be able to:
- Understand the basics of experimental techniques for heat transfer measurements.
- Operate the heat transfer equipment like heat exchangers.
- Process experimental data and obtain correlations to predict heat transfer coefficients for design of heat transfer systems.
- Conduct the experiments at R & D level in the industry.
- Understand the professional and ethical responsibilities in the field of heat transfer.
- Produce a written laboratory report.
Learning Objectives:

- To give basic insights and inputs to the student to inculcate Human values to grow as a responsible human beings with proper personality.
- Professional Ethics instills the student to maintain ethical conduct and discharge their professional duties.

UNIT-I:

UNIT-II:

UNIT-III:

UNIT-IV:

UNIT-V:
UNIT-VI:
Global Issues:

- Related Cases Shall be dealt where ever necessary.

Outcomes:

- It gives a comprehensive understanding of a variety issues that are encountered by every professional in discharging professional duties.
- It provides the student the sensitivity and global outlook in the contemporary world to fulfill the professional obligations effectively.

Reference Books:
4. Engineering Ethics, Harris, Pritchard and Rabins, Cengage Learning, New Delhi.
9. Human Values and Professional Ethics, Jayshree Suresh and B. S. Raghavan, S.Chand Publications.
Learning Objectives:
• To familiarize with the process of management and to provide basic insight into select contemporary management practices
• To provide conceptual knowledge on functional management and strategic management.

UNIT-I:

UNIT-II:
Operations Management: Principles and Types of Management – Workstudy- Statistical Quality Control- Control charts (P-chart, R-chart, and C-chart) Simple problems- Material Management: Need for Inventory control- EOQ, ABC analysis (simple problems) and Types of ABC analysis (HML, SDE, VED, and FSN analysis).

UNIT-III:

UNIT-IV:
Project Management: (PERT/CPM): Development of Network – Difference between PERT and CPM Identifying Critical Path- Probability- Project Crashing (Simple Problems).

UNIT-V:

UNIT-VI:
Contemporary Management Practice: Basic concepts of MIS, MRP, Justin-Time(JIT) system, Total Quality Management (TQM), Six sigma and Capability Maturity Model (CMM) Levies, Supply Chain Management, Enterprise Resource Planning (ERP), Business Process outsourcing (BPO), Business process Re-engineering and Benchmarking, Balanced Score Card.
Outcomes:
After completion of the Course the student:

- Will acquire the knowledge on management functions, global leadership and organizational behavior.
- Will familiarize with the concepts of functional management project management and strategic management.

Text Books:
1. Management Science, Dr. P. Vijaya Kumar & Dr. N. Appa Rao, Cengage, Delhi, 2012.

Reference Books:
7. Strategic Management, Hitt and Vijaya Kumar, Cengage learning.
Learning objectives:
- To understand and be able to describe quantitatively the dynamic behavior of process systems.
- To learn the fundamental principles of control theory including different types of controllers and control strategies.
- To estimate the stability limits for a system, with or without control.
- To calculate and use the frequency response of a system.
- To describe quantitatively the behavior of simple control systems and to design control systems.
- To get exposure to advanced control strategies.
- To design and tune a control loop and to apply this knowledge in the industry/laboratory.
- To design different types of control valves.

UNIT-I:
Introduction to process dynamics and control, Response of first order systems - Physical examples of first order systems.
Response of first order systems in series, higher order systems: Second order and transportation lag.

UNIT-II:
Control systems controllers and final control elements, Block diagram of a Petrochemical reactor control system.

UNIT-III:
Closed loop transfer functions, Transient response of simple control systems.

UNIT-IV:
Stability Criterion, Routh Test, Root locus, Transient response from root locus, Application of root locus to control systems Introduction to frequency response, Control systems design by frequency response.

UNIT-V:
Advanced control strategies, Cascade control, Feed forward control, Ratio control, Smith predictor, Dead time compensation, Internal model control.

UNIT-VI:
Controller tuning and process identification, Control valves.

Outcomes:
At the completion of the course, students should be able to:
- Describe a process, how it works and what the control objectives are.
- Describe processes with appropriate block diagrams.
- Numerically model a process.
- Identify the stability limits of a system.
- Apply the advance control strategies.
- Tune process controllers.
• Experimentally determine the dynamic behavior of a process.
• Design and operate control valves.

**Text Book:**

**Reference Books:**
2. Coulson and Richardson’s Chemical Engineering, Volume-3, 3\textsuperscript{rd} Edition: Chemical and Biochemical Reactors and Process Control, Richardson J. F. et.al, Elsevier India, 2006.
III Year - I Semester

PROCESS INSTRUMENTATION

Learning Objectives:
- To learn the basic elements of an instrument and its static and dynamic characteristics.
- To study various types of industrial thermometers.
- To learn basic concepts of various types of composition analysis.
- To learn various types of instruments for measurement of pressure, vacuum, head, density, level and flow measurement.
- To get an overview of various recording, indicating and signaling instruments, transmission of instrument readings, instrumentation diagrams, control center, process analysis and digital instrumentation.

UNIT-I:
Fundamentals: Elements of instruments, static and dynamic characteristics-Basic concepts of response of first order type instruments.
Industrial Thermometers-1: Mercury in glass thermometer-Bimetallic thermometer-Pressure spring thermometer, Static accuracy and response of thermometry.

UNIT-II:
Industrial Thermometers-2: Thermo electricity-Industrial thermocouples-Thermo couple wires-Thermo couple wells and response of thermo couples; Thermal coefficient of resistance-Industrial resistance-thermometer bulbs and circuits-Radiation receiving elements-Radiation photo electric and optical pyrometers.

UNIT-III:
Composition analysis: Spectroscopic analysis by absorption, emission, mass and color measurement spectrometers-Gas analysis by thermal conductivity, analysis of moisture.
Pressure, vacuum and head: Liquid column manometers-Measuring elements for gauge pressure and vacuum-indicating elements for pressure gauges-Measurement of absolute pressure-Measuring pressure in corrosive liquids-Static accuracy and response of pressure gauges.

UNIT-IV:
Density and specific gravity measurements- Direct measurement of liquid level-Pressure measurement in open vessels-Level measurements in pressure vessels-Measurement of interface level-Density measurement and level of dry materials.

UNIT-V:
UNIT-VI:
Recording instruments-Indicating and signaling instruments-Transmission of instrument readings-Controls center-Instrumentation diagram-Process analysis-Digital instrumentation, SCADA systems.

Outcomes:
The students will be able to:
• Understand the basic elements of an instrument and its characteristics.
• Become familiar with various types of instruments for the measurement of various process variables like temperature, pressure, vacuum, head, level, composition, flow and density.
• Get a clear perspective of various recording, indicating, signaling instruments and transmission of instrument readings.
• Get an understanding of instrumentation diagrams, control center, process analysis and digital instrumentation.

Text Books:
1. Industrial Instrumentation, Donald P.Eckman, CBS, 2004.

Reference Books:
WELL LOGGING & FORMATION EVALUATION

Learning objectives:
• To know the logging terminology.
• To delineate hydrocarbons through direct and indirect means/methods.
• To determine formation lithology through logs like S.P, G.R etc. and also depositional environment with the help of Gamma rays spectroscopy and Dip-meter tools.
• To determine physical properties of the subsurface, strata like resistivity, porosity, thickness etc. through tools like latero, induction, density, neutron, etc.
• To estimate hydrocarbon saturation using the data acquired by the logging tools.
• To estimate hydrocarbons reserves in a particular block.
• To refine the log interpretation data with the help of advanced technology tools namely, Scanner, NMR, Modular formation tester etc.

UNIT-I:
Direct Methods: Mud logging- coring – conventional and sidewall coring - Core analysis.
Concepts of well logging: What is well logging? - Logging terminology-Borehole environment-Borehole temperature and pressure-Log header and depth scale-Major components of well logging unit and logging setup- Classification of well logging methods-Log presentation- Log quality control.

UNIT-II:
Open hole logging: SP Logging- Origin of SP, uses of SP log-Calculation of salinity of formation water- Shaliness-Factors influence SP log.
Resistivity log: Single point resistance log (SPR)- Conventional resistivity logs- Response of potential and gradient logs over thin and thick conductive and resistive formations-Limitations of conventional resistivity tools. Focused resistivity log- Advantages of focused resistivity tools over conventional resistivity tools.
Micro resistivity log: Conventional and focused micro resistivity logs and their application.
Induction log: Principle of induction tool and the advantages, Criteria for selection of induction and lateral logging tool, Determination of true resistivity (Rt) of the formation-Resistivity index-Archie’s equation.

UNIT-III:
Gamma ray log: principle of radioactivity-Uses of gamma ray log- Determination of Shaliness of formation-API counts- Calibration of Gamma ray tool-Statistical fluctuation- Time constant.
Natural Spectral Gamma ray log: Principle and application.
Caliper log: Principle and application of caliper tool.
Sonic log: Principle and application of sonic log-Bore hole compensation-Determination of primary and secondary porosity, determination of mechanical properties of rock, elastic constants, fractures etc.
UNIT-IV:
**Cased hole logging:** Gamma ray spectral log-Neutron decay time log-Determination of fluid saturation behind casing-Cement bond log- Casing collar log-Depth control- Perforation technique- Free point locater and Plug setting-Casing inspection logs.

**Production logging:** Solving production problems with the help of Fluid Density log-Temperature log and Flow meter logs.

UNIT-V:
**Advances in Well logging:** Dip meter log-Formation tester-Cased hole resistivity logs -Nuclear magnetic resonance log & Scanner logs (Sonic scanner, MR scanner Rt scanner).
Calculating the dip of the formations, collection of fluid samples from wells for confirmation of log interpretation, and also recording resistivity in cased holes.

UNIT-VI:

**Outcomes:**
From the well logs the students:
- Will be able to identify the lithology, depositional environment of subsurface strata.
- Will be able to calculate the porosity, permeability, thickness of different interesting layers in a well.
- Calculate finally, the hydrocarbon saturation in different reservoir rocks at the well site itself.

**Text Books:**
Learning Objectives:

- To understand various aspects involved in drilling a well including completion.
- To understand the plan of drilling a well, the process of drilling and various equipment used for drilling and design of the drill string.
- To know the drilling fluid importance and its properties and hydraulics.
- To understand different types of casings lowered in a well, the requirement of cementation in a well and cement slurry design.
- To understand different tools used for directional drilling and various techniques, fishing, stuck pipe and well control concepts.

UNIT-I:

UNIT-II:

UNIT-III:

UNIT-IV:
Cementation: Introduction cement slurries-Typical field calculations- Cementing nomenclature-Cement additives – Cementation of liners.

UNIT-V:
UNIT-VI:

**Stuck pipe, well control:** Kicks- Kick control- Pressure control theory- BOP-Special kick problems and procedures to free the pipes and Fishing operations. Types of fishing tools, Case studies of blow out control.

**Outcomes:**
The students will be able to:

- Apply drilling concepts of a well from planning to rig mobilization to the location.
- Apply the concept of a drill string design for drilling.
- Select the suitable drilling fluids during drilling.
- Do casing and cementation design.
- Carry out directional drilling.
- Troubles shoot well control, stuck pipe and fishing problems.
- Select the proper drilling equipment.

**Text Books:**

**Reference Books:**
MATHEMATICAL METHODS LAB

Learning Objective:

To train the students in writing MATLAB code, executing and doing what if analysis of the variations in the parameters for various problems using mathematical methods.

1. Determination of Molar volume and Compressibility from Redlich-Kwong Equation
2. Calculation of Flow rate in a pipeline
3. Correlation of the Physical properties
4. Compressibility factor variation from Vanderwaals Equation
5. Isothermal compression of gas using RK/SRK/PREquation of State.
6. Thermodynamic properties of steam from RK/SRK/PREquation of State.
7. Solution of Stiff Ordinary Differential Equations
8. Iterative Solution of ODE boundary value problem
9. Shooting method for solving two-point boundary value problems
10. Expediting the solution of systems of nonlinear algebraic equations
11. Solving differential algebraic equations –DAEs
12. Method of lines for Partial Differential Equations

Outcome:

The students will be able to write MATLAB code and solve typical problems encountered in petroleum engineering subjects.

Textbook:
1. Problem solving in Chemical and Biochemical Engineering with POLYMATH, Excel and MATLAB, Michael B. Cutlip and Mordechai Shacham, Prentice Hall, 2008.
Learning Objectives:

- To calibrate and determine the time lag of various first and second order instruments.
- To determine the response in single and two capacity systems with and without interaction.
- To understand the advanced control methods used for complex processes in the industries. Different experiments like Flow, Level and Cascade control can be configured and studied.
- To study the open loop (Manual control) and the ON/OFF controller, Proportional controller, PI controller, PD controller, PID controller, Tuning of controller (Open loop and close loop methods) and to study the stability of the system (Bode plot).
- To understand the control valve operation and its flow characteristics.
- To determine the damping coefficient and response of U-tube manometer.

List of Experiments:

1. Calibration and determination of time lag of various first and second order instruments.
   Major equipment - First order instrument like Mercury-in-Glass thermometer and overall second order instrument like Mercury-in-Glass thermometer in a thermal well.
2. Experiments with single and two capacity systems with and without interaction.
   Major equipment - Single tank system, Two-tank systems (Interacting and Non-Interacting).
3. Level control trainer
   Major equipment - Level control trainer set up with computer.
4. Temperature control trainer
   Major equipment - Temperature control trainer with computer.
5. Cascade control
   Major equipment - Cascade control apparatus with computer.
6. Experiments on proportional, reset, rate mode of control etc.
   Major equipment – PID control apparatus
7. Control valve characteristics
   Major equipment – Control valve set up.
8. Estimation of damping coefficient for U-tube manometer
   Major equipment - U-tube manometer.

Outcomes:
The student will be able to:

- Estimate the dynamic characteristics of first and second order systems.
- Apply the advanced control methods used for complex processes in the industries.
- Screen and suggest controllers like ON/OFF, P, PI, PD and PID for process systems.
- Identify the stability of the system.
- Screen and suggest the types of control valves.
DRILLING FLUIDS LAB

Learning Objective:
• The students will be given hands on training in the determination of the properties of different drilling fluids.

List of Experiments:
1. Measurement of drilling fluid weight.
   Equipment: The Baroid mud balance
   Equipment: Marsh funnel
   Equipment: pH meter and hydron pH dispensers
4. Determination of mud rheology (Viscosity, Gel strength, and Yield point).
   Equipment: The Baroidrheometer
5. Determination of the loss of liquid from a mud.
   Equipment: Standard API filter press
   Equipment: Baroid digital resistivity meter
8. Drilling fluid contamination test (Salt, Gypsum & Cement contamination) and their effect on the drilling fluid properties.
9. Measurement of solid and liquid content and emulsification characteristics of drilling fluid.
   Equipment: Sand content set, fann emulsion and electrical stability testers
10. Measurement of Oil, water, solid and clay content.
    Equipment: Oil/ water retort kit
    (Effect of water ratio on free water separation normal and minimum water content and thickening time)
    Equipment: The atmospheric consistometer
    Equipment: Compressive strength testing machine
13. Measurement of compressive strength of cement test moulds and effect of chemicals on flash setting and retardation
    Equipment: Compressive strength testing machine

Outcomes:
• The students will be able to understand and assess quality of various muds and their applications in drilling. With this knowledge, well control issues will be better understood.
• The training in the laboratory provides the students to carry out good conversation jobs for healthy construction of open oil / gas wells.
Learning Objective:
- To make the students aware of industrial environment, culture, requirements, nature of jobs and to develop accordingly.

During the semester, all the students are required to visit minimum 6 major petroleum industries like ONGC, RIL, GAIL, Oil India Ltd, GSPC and Petroleum Refineries like, HPCL, IOCL and BPCL accompanied by two faculty members. After each visit, every student should submit a very brief report on the industry with flow diagrams and salient features of the processes that include safety and environmental aspects.

Outcomes:
The students will be able to:
- Differentiate between the academic training and its relevance to industry.
- Understand the industrial safety measures.
Learning Objectives:

- To develop innovative and original ideas
- To promote team work

Three / four member teams will be formed to carry out the mini project which is a mandatory course. Under the guidance of an instructor / faculty, each team is given a project in the following subjects at the beginning of I Semester of III year of the 4 – year B. Tech. Program.

The project involves process and mechanical design calculations of an equipment / system / instrument and constructing a working model based on the above calculations. Finally a report will be submitted in a standard format along with the model. The model and report will be assessed by the concerned instructor / faculty for the completion of the mini project – I.

Outcomes:

After successful completion of the mini project, students will be able to:

- Practice acquired knowledge within the chosen area of technology for project/product development.
- Identify, discuss and justify the technical aspects of the chosen project with a comprehensive and systematic approach.
- Work as an individual or in a team in development of technical projects.
- Communicate and report effectively project related activities and findings.
WELL COMPLETIONS, TESTING & SERVICING

Learning Objectives:
- Knowledge of subsurface equipment below well head.
- Planning and designing of well completion after testing of the hydrocarbon zones available.
- Knowledge of subsurface circulating equipment and packers.
- Testing of multi zones in a well with DST/RFT with logging tools as well as surface testing equipment.

UNIT-I:
Well completion: Types of wells- Completion functions- Types of completion.

UNIT-II:
Mechanical aspects of well testing- Cased hole logging equipment and application and perforation methods and perforation equipment.

UNIT-III:
Packers: Function- Application- Proper selection- Packer setting – Packer loads - water / gas shut off, horizon separation etc.

UNIT-IV:
Completion equipment (SSD, SSSV, mandrels, locks etc.-) Data acquisition in wells- Fiber optics- Permanent gauges- Memory gauges- Intelligent completion equipment.

UNIT-V:
Tubing string design (dimension, materials and connections etc.) based on pressure, temperature, operating conditions- Media- Safety requirements.
Drill Stem Testing: General Procedure and considerations- Test tool components and arrangement- Analysis of Test data.

UNIT-VI:
HPHT and horizontal well completions- Workover equipment wireline- Scrubbing unit- Coil tubing completion and work over design and execution.

Outcomes:
The student will be able to:
- Have the knowledge of various equipment used in & on wells.
- Have the knowledge of DST/RFT to know the initial potential of the wells.
- Plan and design the well completion depending of the casing policy and the number of objectives available in the well.
- Plan for suitable safety valves in sub surface as well as on well head for the safe operation of the high pressure and high temperature wells.
- Become a good work over engineer to repair and maintenance of a sick well.
- Be a good CTU (Coil Tubing unit) operator whenever rigs less operation are required to be taken up.
Text Books:

Reference Books:
PETROLEUM PRODUCTION ENGINEERING

Learning Objectives:
The students will be made to learn:

- Fundamental concepts in petroleum production engineering.
- Reservoir fluids, efficient flow to the surface without damaging the reservoir dynamics/drive mechanisms.
- Various surface equipment’s for process oil and gas after flow from wells.
- Sick well identification and remedial stimulation operations.
- Application of suitable artificial lifts on reservoir energy depletion.
- Crisis management.

UNIT-I:
**Petroleum production system over all view:** Production from various types of reservoir based on drive mechanisms field development method, Properties of Oil GOR, density, viscosity, pour point, properties of gas specific gravity, compressibility, molecular weight, calorific value, formation volume factor.

UNIT-II:
**Reservoir deliverability:** Flow regimes- transient, steady state, pseudo steady state IPR for various types of wells, Well bore performance – single & multiphase liquid flow in oil wells, single phase & mist flow in gas wells; Choke performance – sonic & subsonic flow, single & multiphase flow in oil & gas wells; Well deliverability nodal analysis, Well decline analysis.

UNIT-III:
**Artificial lift methods-I:** Sucker rod pumping system- Selection of unit and types of unit, Load & power requirements, Performance analysis, dynagraph;Other lift systems- electrical submersible pumps principle design & operation, hydraulic piston pumping, progressive cavity pumping, plunger lift, hydraulic jet pumping.

UNIT-IV:
**Artificial Lift Methods-II:** Gas lift system evaluation of potential compression requirements, study of flow characteristics, principles of compression, types of compressors, selection of gas lift valves, types of valves, principles of valve operation, setting & testing, design installations.

UNIT-V:
**Production Stimulation:** Well problem identification- sick well analysis; Matrix acidizing-Design for sandstone & carbonate reservoirs, Hydraulic fracturing – formation fracture pressure, geometry, productivity of fractured wells, hydro-fracture design, selection of fracturing fluid, propant, post frac evaluation.

UNIT-VI:
**Production Optimization:** Self flowing wells, wells on gas lift, wells on sucker rod, separator, pipeline network, gas lift facilities, producing fields.
Outcomes:
After the course, the students will be able to:
- Determine the well head pressure, down-hole pressure and operating oil/gas flow rates of the reservoir.
- Identify formation damage and find remedial methods to bring the well back into production.
- Screen, design and operate artificial lifts on reservoir pressure depletions.
- Handle in case of any crisis at drilling/production installations.
- Process oil and gas before supply to refinery/consumers.
- Contribute to reservoir management as production engineers to prolong the reservoir life with optimum production.

Text Books:

Reference Books:
1. Production Technology I-II, Institute of Petroleum Engineering, Herriot Watt University.
PETROLEUM RESERVOIR ENGINEERING-I

Learning Objectives:
- To impart knowledge in the basic concepts like PVT analysis for oil, Material balance applied to oil reservoir, Darcy’s law and applications, well inflow estimation for stabilized flow conditions.
- To make them suitable as reservoir engineers for petroleum industry.

UNIT-I:
Some basic concepts in reservoir engineering: Calculation of hydrocarbon volumes- Fluid pressure regimes- Oil recovery and recovery factor-Volumetric gas reservoir engineering–Application of the real gas equation of state - Gas material balance and recovery factor-Hydrocarbon phase behavior.

UNIT-II:
PVT analysis for oil: Definition of the basic PVT parameters – Collection of fluid samples - Determination of the basic parameters in the laboratory and conversion for field operating conditions - Alternative manner of expressing PVT lab analysis results - Complete PVT analysis.

UNIT-III:
Material balance applied to oil reservoirs: General form - The material balance expressed as a linear equation- Reservoir drive mechanism- Solution gas drive- Gas cap drive- Natural water drive- Compaction drive under related pore compressibility phenomena.

UNIT-IV:
Darcy’s law and applications: Darcy’s law and field potential- Sign convention- Units and units conversion- Real gas potential – Datum pressures- Radial steady state flow and well stimulation- Two phase flow- Effective and relative permeabilities.

UNIT-V:
The basic differential equation for radial flow in a porous medium- Derivation of the basic radial differential equation – Conditions of solution – The linearization of the equation for fluids of small and constant compressibility.

UNIT-VI:
Well inflow estimation for stabilized flow conditions: Semi steady state solution – Steady state solution – Example of the application of the stabilized inflow equations – Generalized form of inflow equation under semi steady state conditions.

Outcomes:
The students will be able to:
- Do calculations on basic PVT analysis of the specific reservoir of various sands.
- Estimate the reserves of various sands of the reservoir from well data.
- Calculate the formation damage and can recommend suitable stimulation operations to reverse the wells.
Text Books:

Reference Books:
PETROLEUM REFINERY & PETROCHEMICAL ENGINEERING

Learning Objectives:
- To understand the properties and their significance of crude oils and petroleum fractions.
- To understand, design and analyze the various petroleum refinery processes including primary, secondary and supporting processes.
- To understand the process technologies for the petrochemical products.

UNIT-I:
Introduction: Overall refinery operations & Indian scenario.
Refinery feed stocks: Crude oil classification-Composition and properties-Composition of petroleum crude suitable for asphalt/coke manufacture – Evaluation of crude oils.

UNIT-II:

UNIT-III:
Crude distillation: Atmospheric and Vacuum distillation units, Auxiliary equipment such as desalters, pipe-still heaters and heat exchanger trains etc.
Catalytic reforming and isomerization: Catalytic reforming processes (for petroleum and petrochemical feed stocks) – Isomerization Processes -Feed stocks-Feed preparation – Yields.

UNIT-IV:

UNIT-V:

UNIT-VI:
Chemicals from gas reforming: Methanol- Acetic acid- Ammonia and urea.
Polymers: LDPE, HDPE & LLDPE and Polypropylene – PVC - Polystyrene.
Outcomes:
The students will be able to gain the knowledge for applicationas follows:

- For a given crude assay, how to handle and store the crude oil.
- What will be the yield, quality of the product, estimation for the primary processes and treatment considerations.
- Maximize the profitable products and minimize the quality giveaway.
- Ability to process the opportunity crudes (e.g. Blending with other crudes) to maximize the throughput and gross margin.
- Application of suitable Hydroprocessing/treatment technologies to meet product qualities and to minimize the CAPEX & OPEX (capital and operating expenditure).
- Application of suitable thermal/catalytic conversion (cracking) processes for Vacuum gas oil/Residupgradation and to produce desired fuel blend components and petrochemical feed stocks.
- Application of suitable processes (such as alkylation, reforming, isomerization) for converting light ends/ naphtha cuts to meet the desired gasoline blends.
- Understanding of various petrochemical feed stocks and their origin from refining/gas processes.
- Knowledge of various petrochemical products in the market and best available technologies to produce them.

Text Books:

Reference Books:
Learning Objectives:

UNIT-I:
Introduction:
(a) **Measurement Errors:** Gross errors and systematic errors, Absolute and relative errors, Accuracy, Precision, Resolution and Significant figures.
(b) **Voltmeters and Multimeters:** Introduction Multi range voltmeter, Extending voltmeter ranges, Loading, AC voltmeter using Rectifiers – Half wave and full wave, Peak responding and True RMS voltmeters.

UNIT-II:

UNIT-III:
Oscilloscopes: Introduction, Basic principles, CRT features, Block diagram and working of each block, Typical CRT connections, Dual beam and dual trace CROs, Electronic switch.
**Special Oscilloscopes:** Delayed time-base oscilloscopes, Analog storage, Sampling and Digital storage oscilloscopes.

UNIT-IV:
Signal Generators: Introduction, Fixed and variable AF oscillator, Standard signal generator, Laboratory type signal generator, AF sine and Square wave generator, Function generator, Square and Pulse generator, Sweep frequency generator, Frequency synthesizer.

UNIT-V:
Measurement of resistance, inductance and capacitance: Whetstone’s bridge, Kelvin Bridge; AC bridges, Capacitance Comparison Bridge, Maxwell’s bridge, Wein’s bridge, Wagner’s earth connection.

UNIT-VI:
**Transducers & Miscellaneous:** Introduction, Electrical transducers, Selecting a transducer, Resistive transducer, Resistive position transducer, Strain gauges, Resistance thermometer, Thermistor, Inductive transducer, Differential output transducers, LVDT, Piezoelectric transducer, Photoelectric transducer, Photovoltaic transducer, Semiconductor photo devices, Temperature transducers-RTD, Thermocouple.
**Display devices:** Digital display system, classification of display, Display devices, LEDs, LCD displays; Bolometer and RF power measurement using Bolometer; Introduction to Signal conditioning.
Outcomes:

Text Books:
2. Electronic Instrumentation and Measurements, David A Bell, PHI / Pearson Education, 2006.

Reference Books:
Learning Objectives:

- Optimize business decisions and create competitive advantage with Big Data analytics.
- Introducing Java concepts required for developing map reduce programs.
- Derive business benefit from unstructured data.
- Imparting the architectural concepts of Hadoop and introducing map reduce paradigm.
- To introduce programming tools PIG & HIVE in Hadoop echo system.

UNIT-I:
**Data structures in Java:** Linked List, Stacks, Queues, Sets, Maps; Generics: Generic classes and Type parameters, Implementing Generic Types, Generic Methods, Wrapper Classes, Concept of Serialization

UNIT-II:
**Working with Big Data:** Google File System, Hadoop Distributed File System (HDFS) – Building blocks of Hadoop (Namenode, Datanode, Secondary Namenode, JobTracker, TaskTracker), Introducing and Configuring Hadoop cluster (Local, Pseudo-distributed mode, Fully Distributed mode), Configuring XML files.

UNIT-III:
**Writing MapReduce Programs:** A Weather Dataset, Understanding Hadoop API for MapReduce Framework (Old and New), Basic programs of HadoopMapReduce: Driver code, Mapper code, Reducer code, Record reader, Combiner, Partitioner

UNIT-IV:
**Hadoop I/O:** The Writable Interface, Writable comparable and comparators, Writable Classes: Writable wrappers for Java primitives, Text, BytesWritable, NullWritable, ObjectWritable and GenericWritable, Writable collections, Implementing a Custom Writable: Implementing a Raw comparator for speed, Custom comparators

UNIT-V:
**Pig:** Hadoop Programming Made Easier; Admiring the Pig Architecture, Going with the Pig Latin Application Flow, Working through the ABCs of Pig Latin, Evaluating Local and Distributed Modes of Running Pig Scripts, Checking out the Pig Script Interfaces, Scripting with Pig Latin

UNIT-VI:
**Applying Structure to Hadoop Data with Hive:** Saying Hello to Hive, Seeing How the Hive is Put Together, Getting Started with Apache Hive, Examining the Hive Clients, Working with Hive Data Types, Creating and Managing Databases and Tables, Seeing How the Hive Data Manipulation Language Works, Querying and Analyzing Data.
Outcomes:

- Preparing for data summarization, query, and analysis.
- Applying data modeling techniques to large data sets.
- Creating applications for Big Data analytics.
- Building a complete business data analytic solution.

Text Books:

3. Hadoop in Action, Chuck Lam, MANNING Publ.

Reference Books:

1. Hadoop in Practice, Alex Holmes, MANNING Publ.
2. HadoopMapReduce Cookbook, SrinathPerera, ThilinaGunarathne.

Software Links:

2. Hive: https://cwiki.apache.org/confluence/display/Hive/Home
3. Piglatin: http://pig.apache.org/docs/r0.7.0/tutorial.html
Learning Objectives:

- To impart the necessity of finding alternative energy sources for automobiles. To understand merits and demerits, performance characteristics of various sources of fuels and their comparison.

UNIT-I:
Objective: The objective is to introduce the use and the application of different fuel types and characteristics. The student will be able to understand Solar photo-voltaic conversion and working principles.
Solar photo-voltaic conversion, Collection and storage of solar energy, Collection devices, flat plate collectors, concentrating type collectors, Principles and working of photo-voltaic Conversion, Applications to automobiles.

UNIT-II:
Objective: The objective is to expose the student about energy from bio-mass performance characteristics.

UNIT-III:
Objective: The objective is to expose the students to study and understand basic principles of hydrogen energy and thermo-chemical production.

UNIT-IV:
Objective: To learn various factors to be considered in hydrogen fuel usage, and to study performance. Design and study of future possibilities of electric automobiles.
Hydrogen fuel, Storage and transportation methods, Applications to engines modifications necessary, precautions and safety measures - Performance characteristics in engine and their comparison.
Electric Automobiles: Design considerations, limitations. Opportunities for improvement Batteries, problems. Future possibilities, capacities, types, material requirement.
UNIT-V:
Objective: To learn various factors to be considered in hydrogen fuel usage, study of performance. Design and study of future possibilities of electric automobiles.
Applicability of electric cars, major parts, battery charging, HVAC, requirements, comparative use of fuel and energy;, Availability of energy for recharging; Impacts on use of fuel and energy; Impact on urban air quality, impact on price, material requirement traction motors and types.

UNIT-VI:
Objective: To study the use of turbines in automobiles and Design of turbochargers for automobiles.
Hybrid vehicle, benefits, types of HEVs, hybrid maintenance and service.
Use of turbines in cars, arrangement, control merits and de-merits, Design of turbochargers for automobiles, their usefulness on the performance, Use of fuel cells in automobiles.

Outcomes:
• The students completing the course will be able to understand the ever increasing quality of life. This phenomenon imposes high demand on conventional fossil fuels. Hence search for alternate fuels is a continuous phenomenon. The student will have an overview of various alternate fuels along with their merits and limitations.

Text Books:
2. Electric Automobiles, William Hamilton, PHI.
3. Alternative Fuel Technology, Erjavec and Arias, Cengage Learning

Reference Books:
Learning Objectives:
- Outline planning and the design of waste water collection, conveyance and treatment systems for a community/town/city.
- Provide knowledge of characterization of waste water generated in a community.
- Impart understanding of treatment of sewage and the need for its treatment.
- Summarize the appurtenance in sewage systems and their necessity.
- Teach planning and design of septic tank and imhoff tank and the disposal of the effluent from these low cost treatment systems.
- Effluent disposal method and realize the importance of regulations in the disposal of effluents in rivers.

UNIT-I:

UNIT-II:
Pumping of wastewater: Pumping stations - location - components - Types of pumps and their suitability with regard to wastewaters.
House Plumbing: Systems of plumbing - sanitary fittings and other accessories - one pipe and two pipe systems - Design of building drainage.

UNIT-III:
Sewage characteristics: Sampling and analysis of waste water - Physical, chemical and Biological examination - Measurement of BOD & COD - BOD equations.
Treatment of sewage: Primary treatment - Screens - grit chambers - grease traps - floatation - sedimentation - Design of preliminary and primary treatment units.

UNIT-IV:
Secondary treatment: Aerobic and anaerobic treatment process - comparison.
Suspended growth process: Activated sludge process, principles, Design and operational problems, modifications of activated sludge processes, oxidation ponds, aerated lagoons.
Attached Growth process: Trickling Filters - Mechanism of impurities removal - classification - Design - operation and maintenance problems; RBCs, Fluidized bed reactors.

UNIT-V:
UNIT-VI:

Disposal of sewage: Methods of disposal- Disposal into water bodies- Oxygen sag Curve-Disposal into sea-disposal on land- Sewage sickness.

Outcomes:
By the end of successful completion of this course, the students will be able to:
- Plan and design the sewerage systems.
- Characterization of sewage.
- Select the appropriate appurtenances in the sewerage systems.
- Selection of suitable treatment flow for sewage treatment.
- Identify the critical point of pollution in a river for a specific amount of pollutant disposal into the river.

Text Books:
5. Industrial Water & Wastewater Management, KVSG MuraliKrishna.

Reference Books:
2. Sewage Treatment and Disposal, Dr.P.N.Modi&Sethi.
FUNDAMENTALS OF LIQUEFIED NATURAL GAS
(OPEN ELECTIVE)

Learning Objectives:
- To impart basic knowledge of LNG and its prospective.
- To learn different liquefaction technologies of LNG.
- To have knowledge on different functional units on receiving terminals
- To analyze transportation of LNG and regasification.
- To understand HSE of LNG industry.

UNIT-I:
**Introduction:** Overview of LNG industry: History of LNG industry – Base load LNG – Developing an LNG Project – World and Indian Scenario – Properties of LNG.

UNIT-II:
**Liquefaction Technologies:** Propane precooled mixed refrigerant process – Description of Air products C₃MR LNG process – Liquefaction – LNG flash and storage.  
**Cascade process:** Description of Conoco Phillips Optimized Cascade (CPOC) process – Liquefaction – LNG flash and storage.  

UNIT-III:
**Supporting Functional Units in LNG Plants:** Gas pretreatment: Slug catcher – NGL stabilization column – Acid gas removal unit – Molecular sieve dehydrating unit – Mercury and sulfur removal unit – NGL recovery – Nitrogen rejection – Helium recovery.

UNIT-IV:
**Receiving Terminals:** Receiving terminals in India – Main components and description of marine facilities – Storage capacity – Process descriptions.  
Integration with adjacent facilities – Gas interchangeability – Nitrogen injection – Extraction of C₂⁺ components.

UNIT-V:
**LNG Shipping Industry & Major Equipment in LNG Industry:** LNG Shipping Industry: LNG fleet – Types of LNG ships – Moss – Membrane – prismatic; Cargo measurement and calculations.  
Major equipment in LNG industry – Cryogenic heat exchangers: Spiral – Wound heat exchangers – Plate & fin heat exchangers – Cold boxes; Centrifugal compressors – Axial compressors – Reciprocating compressors; LNG pumps and liquid expanders – Loading Arms and gas turbines.
UNIT-VI:

**Vaporizers:** Submerged combustion vaporizers- Open rack vaporizers – Shell and tube vaporizers: direct heating with seawater, and indirect heating with seawater. Ambient air vaporizers: Direct heating with ambient air – Indirect heating with ambient air.; LNG tanks.

**Outcomes:**

Upon successful completion of this course, the student will be able to:

- Have good knowledge on LNG process.
- Classify different liquefaction techniques.
- Understand different units in LNG processing and transportation.
- Have knowledge associated with safety aspects of LNG.

**Text Book:**

**Reference Books:**

Learning Objectives:

- Understanding the governing equations of fluid dynamics and the difference between conservation and non-conservations form of equations.
- Various methods available for solutions of partial differential equations.
- Use of boundary conditions for solutions of these equations.
- Understanding the role of finite elemental methods for solutions of fluid dynamics problems.
- Understanding the concept of stability.
- Understanding various software’s available for solving fluid dynamics problems.

UNIT-I:
Basic Philosophy of CFD: Governing equations of Fluid Dynamics, Incompressible Inviscid flows sources and vortex panel methods.

UNIT-II:

UNIT-III:
Transformations and Grids, Explicit finite Differential methods – Some selected applications to Inviscid and viscous flows.

UNIT-IV:
Boundary layer equations and methods of solution.

UNIT-V:
Implicit time dependent methods for Inviscid and viscous compressible flows, with a discussion of the concept of Numerical dissipation.

UNIT-VI:
Outcomes:
The students will be able to:
- Use of finite difference method and finite volume method for practical applications.
- Use of software tools available for arriving at some problems of interest.
- Distinguish different flow regimes while performing numerical analysis.
- Use of source and vortex panel method of inviscid flow to practical problems.
- Arrive at pressure and flow distribution for complicated flow systems.

Text Books:

Reference Books:
DRILLING SIMULATION LAB

Learning Objectives:
- Drilling simulation lab familiarizes student not only the normal drilling operations but also abnormal conditions in drilling.
- The student can get acquaintance with the drilling operations preventing abnormal conditions like Wall kicks, Blowouts, Mud losses etc.
- The student can have the knowledge how to handle the BOP, Panels, Choke manifold, Remote panel etc., in case of any emergency situation.
- Drilling simulation lab covers all abnormal drilling operations that help the student to have total knowledge of the drilling in live conditions.

The following experiments are to be carried out using a drilling simulator:
1. Familiarization and line-up of operational components – I: Sand pipe manifold, draw work console, drilling console.
2. Familiarization and line-up of operational components – II: Blow out preventer (BOP) panel, choke manifold, remote panel.
3. Operation of major components: Mud pumps, operating slow circulation rate, operating the rotary table, pulling weight on bit running in and pulling out of hole, remote choke panel operating.
4. Kick identifications and well shut in procedures: Setting flow alarms (deviation mud volume), setting flow alarms for return mud volume, identifying kick warning signs, Utilizing shut in procedures to kill well, well control computations.
5. Studies on the effect of weight on drill bit and rotary speed on the rate of penetration and wear of the bit.

Outcomes:
The student will be able to:
- Familiarize with abnormal drilling operations and handle any drilling situation without any panic.
- Be conversant with the BOP, control panel, remote control panel etc.
- To identify the abnormal activities much in advance and plan to prevent the Kick, Blowout etc.
- Become a very good drilling engineer by improving the rate of drilling even in critical conditions.
PETROLEUM ANALYSIS LAB

Learning Objectives:

- The objective of the petroleum analysis lab is to determine the physical and transport properties like Reid vapor pressure, Viscosity, Smoke point, Flash point & Fire point, Aniline point, Cloud & Pour point, Softening point, Calorific value, Water content of different petroleum products by conducting laboratory experiments using different apparatus and to determine the distillation characteristics of petroleum products.

List of Experiments:

1. Determination of Distillation characteristics of Crude Oil, Gasoline, Diesel and Kerosene.
2. Determination of Reid Vapor Pressure of Crude oil & Gasoline.
4. Determination of Smoke Point of Kerosene.
6. Determination of Flash & Fire points of gasoline, kerosene and other products.
7. Estimation of Water content in petroleum products.
8. Estimation of Calorific value of solid, liquid and gaseous fuels.
10. Determination of Softening point of bitumen.
12. Detection of Corrosiveness of petroleum products

Outcomes:

- The students will be able to handle various apparatus/equipment in determining the physical and transport properties of different petroleum products and also will be able to analyze the various products of petroleum components.
Learning Objectives:
- The students are made to understand experimental determinations of reservoir (Oil as well as gas) properties such as Porosity, Absolute & Relative permeability, Capillary pressure, Fluid properties like Density, Viscosity and Surface tension etc.

List of Experiments:
1. Determination of effective porosity by gas expansion method.
   Equipment: Helium Porosimeter (Nitrogen gas can be used in place of helium).
2. Determination of porosity and pore size distribution by mercury injection.
   Equipment: Mercury Porosimeter.
3. Measurement of surface tension & interfacial tension with the ring Tensiometer.
   Equipment: Tensiometer.
   Equipment: Pycnometer and hydrometer.
5. Liquid viscosity measurement using capillary tube viscometer (Ostwald type).
   Equipment: Capillary tube viscometer.
6. Determination of capillary pressure of reservoir rock (core) using porous plate method.
   Equipment: Capillary pressure cell.
7. Measurement of contact angle (between oil, water and solid surface) using imaging method.
   Equipment: The image system set-up.
   Equipment: Constant head Permeameter with the Hassler cell.
9. Absolute permeability measurement of water.
   Equipment: The Darcy apparatus.
10. Determination of relative permeability of oil-water using unsteady state method.
    Equipment: Relative permeability apparatus.
    Equipment: Relative permeability apparatus.

Outcomes:
- The students will become conversant in experimental procedures to acquire process, analyze and interpret the reservoir and reservoir fluid data.
- This laboratory work makes the students to become good reservoir engineers.
Every Student should undergo summer training (summer internship program) in a petroleum oil & gas producing industry/ petroleum machinery manufacturing industry for 4-6 weeks and submit a report.

**Learning Objectives:**
The student is guided (through the Industry representative) to learn the following aspects:
- Application of the engineering skills, learned in class room, in real world.
- Working as a team to deliver the results along with senior engineering professionals, technicians, managers etc.
- Work safely in industrial environment.
- Result oriented approach in plant operation, troubleshooting and engineering work.
- Present and/or report the work/project outcomes to various disciplines, departments & interest groups with confidence.

**Outcomes:**
The student shall be able to independently carryout the following tasks:
- Work safely in Industrial environment.
- Work with various interest groups, disciplines, professionals, managers, technicians etc.
- Polish the engineering skills by applying the knowledge in day-to-day operation, troubleshooting and minor-modifications.
- Building relations with University and Industry that will help mutual cooperation over long-term.
### Learning Objectives:
- To develop innovative and original ideas
- To promote team work

Three / four member teams will be formed to carry out the mini project which is a mandatory course. Under the guidance of an instructor / faculty, each team is given a project in the following subjects at the beginning of II Semester of III year of the 4 – year B. Tech. Program.

Drilling Technology, Well Completions, Petroleum Production Engineering, Petroleum Reservoir Engineering.

The project involves process and mechanical design calculations of an equipment / process/system and constructing a working model based on the above calculations. Finally a report will be submitted in a standard format along with the model. The model and report will be assessed by the concerned instructor / faculty for the completion of the mini project –II.

### Outcomes:
After successful completion of the mini project, students will be able to:
- Practice acquired knowledge within the chosen area of technology for project development.
- Identify, discuss and justify the technical aspects of the chosen project with a comprehensive and systematic approach.
- Work as an individual or in a team in development of technical projects.
- Communicate and report effectively project related activities and findings.
Learning Objectives:

- The students will learn the general principles of asset management, integrated petroleum, reservoir management and integrated oil & gas asset management.
- Introduces the student to the processes and modeling paradigms needed to develop the skills to increase reservoir output, profitability and decrease speculation.
- Develop references to recognize the technical diversity of modern reservoir management teams.
- Develop an overview of reservoir management, fluids, geological principles used to characterization and two key reservoir parameters.
- Expose to modeling tools and additional exercises are included on a companion website.
- Seamlessly brings together concepts and terminology, creating an interdisciplinary approach for solving everyday problems.

UNIT-I:
Asset Management: The corporate dimension – Data gathering – Interpreting the main data.

UNIT-II:
Developing a decision making framework: Populating asset management plans – Creating a strategic outline and business case for investment – The corporate asset management plan; Developing an integrated asset management and capital planning system: Overview.

UNIT-III:
Reservoir management concepts – Reservoir management process – Data acquisition, analysis and management.

UNIT-IV:
Reservoir performance analysis and forecast – Reservoir management economics – Reservoir management case studies.

UNIT-V:
Industrial asset management strategies for the oil and gas sector: Overview of Onshore and Offshore assets – Integration and optimization methodology – A case study in OPEX of the assets – Evaluation of asset performance.

UNIT-VI:
An asset management model – Typical oil field workflow – Workflows for asset management – An automated approach to data quality management – Change management.
Outcomes:
The students will be able to:

- Understand the working principles of an oil and gas asset management.
- Optimize the functions of each segment of an asset.
- Understand the concepts & terminology and develop an interdisciplinary approach for solving everyday problems.

Text Books:

Learning Objectives:

- To make the students learn fundamentals as well as advanced topics in reservoir engineering like The constant terminal rate solution and its applications to oil well testing, gas well testing, natural water influx, immiscible displacement, material balance of unconventional gas reservoir, coal bed methane, tight gas reservoirs, gas hydrates.

UNIT-I:
The constant terminal rate solution of the radial diffusivity equation and its application to oil well testing: The constant terminal rate solution – Transient, semi steady state and steady state flow conditions – Dimensionless variables – General theory of well testing – The Mathews, Brons, Hazebroek pressure build up theory - Pressure build up analysis techniques – Multi Rate Drawdown testing – The effects of partial well completion – After flow analysis.

UNIT-II:
Gas well testing: Linearization and solution of the basic differential equation for the radial flow of a real gas – The Russel, Goodrich et. al. Solution technique – The Al Hussainy, Ramey Crawford solution techniques – Non-Darcy flow – Determination of the non-Darcy coefficient F - The constant terminal rate solution for the flow of a real gas – General theory of gas well testing – Multi rate testing of gas wells.

UNIT-III:
Pressure build up testing of gas wells: Pressure build up analysis in solution gas drive reservoirs-Analysis of well tests using type curves- Interference and Pulse Tests - Flow after flow tests in gas wells- Isochronal & modified isochronal tests- Use of pseudo pressure in gas well test analysis- Injection Well Testing.

UNIT-IV:
Natural water influx: The unsteady state water influx theory of Hurst and Van Everdingen and its application in history matching – The approximate water influx theory of Fetkovich for finite aquifers predicting the amount of water influx – Application of influx calculation techniques to steam soaking.

UNIT-V:

UNIT-VI:
Unconventional Gas Reservoirs: Material balance equation for conventional and unconventional gas reservoirs- Coal bed methane - Tight gas reservoirs - Gas hydrates - Shallow gas reservoirs.
Outcomes:
The students will be able to:

- Carry out the interpretation of Well Test Data.
- Estimate the reserves of various sands of the reservoir along with water production.
- Calculate the formation damage and water in flux, according he can recommend proper stimulation jobs.
- Learn the advanced topics like Coal bed methane and Gas hydrates.
- Recommend for tight gas reservoirs with proper hydrofracturing.
- Learn how to acquire the data through well testing in dynamic and closed conditions.
- Estimate the long term profiles of the reservoirs.

Text Books:

Reference Books:
SURFACE PRODUCTION OPERATIONS

Learning objectives:
- Operate and maintain the surface equipment installed in GGS/GCS.
- Smooth operation of equipment with minimum manpower and handling more crude oil/gas.
- Priority to safety operations so that free of even minor accidents.
- Have the knowledge of various Acts of safety and environmental protection.
- Understand modes of transportation types of storage.
- Distribution & Custody transfer.
- Pressure maintenance & Reservoir performance monitoring.

UNIT-I:
Production facilities: Various types of facilities Controlling the process-Basic system configuration design & selection of facilities: Wellhead and manifold- Separation-Initial separation pressure- Stage Separation, Selection of Stages, Process flow sheets, P&IDs, monitoring well performance testing & optimization of flow.

UNIT-II:

UNIT-III:
Oil desalting systems: Oil desalting systems-Equipment description of desalters- Mixing equipment- Process description- Single stage desalting- Two stage desalting; Monitoring of oil quality.

UNIT-IV:
Storage facilities, measurements custody transfer marketing- transportation modes & dispatch. Gas dehydration compression measurements custody transfer marketing- transportation dispatch. Fire protection systems for tank farm pumping /compressor stations.
UNIT-V:

UNIT-VI:
Water injection facilities, Sources of water, Treatment system, Pumping, Chemical dosing, Identification wells, Patterns of injections well performance monitoring reservoir monitoring.

**Outcomes:**
The students can:
- Do the efficient separation of oil and gas.
- Maintain the quality of oil, required by the refineries.
- Work on the various control systems fitted on the separators/heater-treaters, so that smooth operation of GGS/GCS can be maintained.
- Figure out the crude oil emulsions produced from various wells and he can treat such crudes to the required oil quality.
- Work with various safety systems fitted from well to the surface equipment’s storage, pumping stations and he can ensure accident free operation till the oil is supplied to refiners and gas to consumers.
- Perceive the treatment of produced water and disposal of the same as per the norms laid by regulatory authorities
- Carry out pressure maintenance & monitoring of reservoir performance to improve recovery.

**Text Books:**
Learning Objectives:
- The students are made to learn the design of all types of separators, pumps & compressors, heat exchangers, oil treaters, desalters, gas treating systems, different types of valves and flaring systems
- Imparting knowledge on material of construction and mechanical design of the petroleum equipment.

UNIT-I:

UNIT-II:
Fluid Flow equipment Design: Basic concepts of fluid handling equipment & design-Pumps - Compressors - Blowers.

UNIT-III:

UNIT-IV:
Design principles and sizing crude oil treaters: Sizing horizontal and vertical treaters- Design of LTX units and line treaters- Material of construction and mechanical design. Design of principles and sizing of crude desalting equipment - Design principles and sizing of equipment for produce water treatment and disposal.

UNIT-V:

UNIT-VI:
Design principles and sizing of pressure relief valves, vents, other relieving devices- Selection criteria- Location- Maintenance- Design of flaring systems.
Outcomes:
The students will be able to:

- Design of all types of separators, pumps & compressors, heat exchangers, oil-treaters, desalters, gas treating systems, different types of valves and flaring systems with necessary details.
- Specify the material of construction for the petroleum equipment.
- Carry out the mechanical design of the petroleum equipment.

Text Books:

Reference Book:
Learning Objectives:
This course is designed to introduce a basic study of natural gas hydrates and its properties. The student will be imparted the knowledge of:

- Overview of NGH and classification of NGH.
- Hydrate formation by using different methods.
- Exhibiting hydrate formation and dehydration processes.
- Different physical and chemical properties of NGH.
- Deactivating the hydrates using heat and pressure.

UNIT-I:

Hydrate types and formers: Type I hydrates- Type II hydrates- Size of the guest molecule- n-Butane- Other hydrocarbons and non-hydrocarbon molecules- Chemical properties of potential guests- Liquid hydrate formers- Type H hydrates- Hydrate forming conditions- Pressure-Temperature- Composition- Other hydrate formers- Mixtures- Examples.

UNIT-II:
Hydrate formation hand calculation methods: Gas gravity method- K-Factor method- Baillie-Wichert method- Comments on these methods- Examples.

Hydrate formation computer methods: Phase equilibrium- Van der Waals and Platteeuw-Parrish and Prausnitz-Ng and Robinson methods- Calculations- Commercial software packages- Accuracy of these programs- Dehydration- Examples.

UNIT-III:

UNIT-IV:

UNIT-V:

Phase diagrams: Phase rule- Comments about phases- Single component systems- Binary systems- Phase behavior below 0°C- Multicomponent systems- Examples.
UNIT-VI:

Water content of natural gas: Equilibrium with liquid water- Equilibrium with solids- Examples.

Outcomes:
After successful completion of the course the students will be able to:
- Have good knowledge in dealing with NGH.
- Model different forms of hydrate formation using both hand calculations and computer methods.
- Understand different properties of NGH.
- Design line heaters for effective transportation.
- Have knowledge of different equilibriums of liquid water and solids with natural gas.
- Understand the challenges of NGH.

Text Books:

Reference Book:
Learning Objectives:

• Operations and maintenance of flow lines or trunk pipe lines.
• Understanding of well fluids for proper designing of flow lines/trunk pipe lines.
• Obtaining the permissions to laying of pipe line as per the State/DGMS regulations.
• Operation and maintenance of gas compressors.
• Handling of flammable fluids like gas, oil condensate to check the accident free operation.
• Protection from internal/external corrosion of pipe lines by suitable methods.

UNIT-I:

UNIT-II:

UNIT-III:

UNIT-IV:
Transient flow in liquid and gas pipelines:Purpose of transient analysis – Theoretical fundamentals and transient solution technique – Applications – Computer applications.
UNIT-V:
**Pipeline mechanical design:** Codes and standards – Location classification – Pipeline design formula – Expansion and flexibility – Joint design for pipes of unequal wall thickness – Value assemblies – Scraper traps – Buoyancy control – Crossings – Depth of cover – Aerial markings – Warning signs.

**Pipeline construction:** Construction – Commissioning.

UNIT-VI:
**Materials selection:** Elements of design – Materials designation standards.

**Pipeline protection, Instrumentation and Pigging:** Pipeline coating – Cathodic protection – Cathodic protection calculations for land pipelines – Internal corrosion – Flow meters and their calibration – Sensors – Pigs.

**Outcomes:**
The students will be able to:
- Become a specialist in pipeline designing and pipeline maintenance.
- Repair and maintenance of pipeline in short time to avoid production loss.
- Plan for suitable corrosion protection methods to improve the life of the pipeline.
- Be a good public relations officer to deal with public in acquiring the land & also during repair & maintenance operations.

**Text Books:**

**Reference Books:**
HORIZONTAL WELL TECHNOLOGY
(ELECTIVE-I)

Learning Objectives:
This course introduces fundamentals of horizontal wells by dealing with reservoir and production characteristics of horizontal wells and respective challenges.
The students will be able to:
• Understand the basics of horizontal wells and its reservoir properties.
• Have knowledge of different types of horizontal wells.
• Differentiate between horizontal and vertical fractured wells.
• Understand the testing and flow performance using different equations.
• Gain knowledge on critical rates of flow and challenges during different rates of flow like gas and water coning.

UNIT-I:
Overview of horizontal well technology: Introduction- Limitations of horizontal wells- Horizontal well applications- Drilling techniques- Horizontal well length based upon drilling techniques and drainage area limitations- Completion techniques.
Reservoir engineering concepts: Skin factor- Skin damage for horizontal wells- Effective wellbore radius $r'_w$- Productivity index, $f$- Flow regimes- Influence of areal anisotropy.

UNIT-II:
Steady-state solutions: Steady-state productivity of horizontal wells- Effective wellbore radius of a horizontal well- Productivity of slant wells- Comparison of slant well and horizontal well productivities- Formation damage in horizontal wells- Field histories.
Influence of well eccentricity: Introduction- Influence of well eccentricity- Drilling several wells- Horizontal wells at different elevations.

UNIT-III:
Comparison of horizontal and fractured vertical wells: Vertical well stimulation- Types of fractures- Comparison of horizontal wells and finite conductivity fractures- Horizontal wells in fractured reservoirs- Fractured horizontal wells.

UNIT-IV:
Transient well testing: Introduction-Mathematical solutions and their practical implications- Generalized flow regimes- Pressure response- Detailed well testing flow regimes- Pressure directivities- Wellbore storage effects- Practical Considerations.

UNIT-V:
Pseudo-steady state flow: Generalized pseudo-steady state equation for vertical wells- Shape factors for vertical wells- Shape factors for fractured vertical wells- Shape factors of horizontal wells- Horizontal well pseudo-steady state productivity calculations- Inflow performance of partially open horizontal wells- Inflow performance relationship (IPR) for horizontal wells in
solution gas-drive reservoirs- Predicting horizontal well performance in solution gas-drive reservoirs.

UNIT-VI:
**Water and gas coning in vertical and horizontal wells:** Critical rate definition- Vertical well critical rate correlations- Critical rate by production testing- Decline curve analysis- Water breakthrough in vertical wells- Vertical well post-water breakthrough behavior- Characteristics of water cut versus recovery factor plots- Water and gas coning in horizontal wells- Horizontal well breakthrough time in a bottom- Critical rate for horizontal well in edge-water drive reservoir practical considerations.

**Outcomes:**
After successful completion of this course, the students will be able to:
- Have an overview of horizontal well technologies.
- Perform flow performance calculations of horizontal wells.
- Perform mathematical solutions to transient well testing for different flow regimes.
- Solve challenges for different flow rates.
- Design a horizontal well.

**Text Book:**

**Reference Book:**
Learning Objectives:
This course introduces the student the basics of coal bed methane by giving an overview of reservoir, drilling, production.
This course makes the studentsto:
  • Have overview of scenario of CBM.
  • Have knowledge on the geology of coal.
  • Deal with basic principles of sorption and isotherms.
  • Analyze reservoir characterizes of CBM.
  • Have basic idea of completions and driving of CBM reservoirs.
  • Understand the hydrofrac job for coal seams.
  • Learn in dealing with water from production and disposal.

UNIT-I:
**Introduction**: Overview of coal bed methane (CBM) in India – CBM vs Conventional Reservoirs.

UNIT-II:
Geological influences on coat formation of coals – Coal chemistry – Significance of rank – Cleat system and natural fracturing.

UNIT-III:
**Sorption**: Principles of Adsorption-The Isotherm construction-CH$_4$ retention by coal seams-CH$_4$ content determination in coal seams-The isotherm for recovery prediction-Model of the micro pores-coal sorption of other molecular species.

UNIT-IV:
**Reservoir Analysis**: Coal as a reservoir-Permeability-Porosity-Gas flow-Reserve analysis-Well spacing and drainage area-Enhanced recovery.

UNIT-V:
**Well Construction**: Drilling-Cementing.
Formation Evaluations, Logging:Borehole environment-Tool measurement response in coal-wire line log evaluation of CBM wells-Gas-In-Place calculations-Recovery factor-Drainage area calculations-Coal permeability/Cleating-Natural fracturing and stress orientation-Mechanical rock properties in CBM evaluation.
**Completions**: Open hole completions-Open hole cavitation process, Cased hole completions-Multi zone entry in cased hole.
UNIT-VI:
Hydraulic fracturing of coal seams: Need for fracturing coals-Unique problems in fracturing coals-Types of fracturing fluids for coal-In situ conditions-Visual observation of fractures.

Water production and disposal: Water production rates from methane wells-Chemical content-Environmental regulations-Water disposal techniques-Economics of coal bed methane recovery.

Outcomes:
By successful completion of this course, the students will be able to:
- Master the fundamentals of coal bed methane.
- Construct different isotherms.
- Evaluate different logs for CBM reservoirs.
- Have good knowledge on water disposal techniques and environmental laws.
- Understand reservoir drilling and production of CBM.
- Design a CBM well.

Text Books:

Reference Books:
Learning Objectives:
- Introduce different types of deep water offshore structures and challenges.
- Introduce concept of wave theory for linear waves.
- Estimation of wave loads on small bodies.
- Estimation of different types of loads on offshore structures such as gravity, wind, wave and current loads.
- Detailed design of fixed offshore structures.
- Concepts of floating structures.
- Fundamental aspects of semisubmersible, TLP, spar and installation methodologies.

UNIT-I:
Overview of offshore structures: Introduction- Deepwater challenges- Functions of offshore structures- Offshore structure configurations- Bottom-Supported fixed structures- Compliant structures- Floating structures- Classification societies and industry standard groups.
Novel and small field offshore structures: Introduction- Overview of oil and gas field developments- Technical basis for developing novel offshore structures- Other considerations for developing novel offshore structures- Novel field development systems- Future field development options.

UNIT-II:
Ocean environment: Introduction- Ocean water properties- Airy’s Wave theory- Wave kinematics along the depth of water.

UNIT-III:

UNIT-IV:
Formulation of mathematical model of framed structure: Degrees of freedom of a beam element, Development of stiffness matrix of a beam element, transformation of local stiffness matrix to global stiffness matrix, Assemble of global stiffness matrix of a two dimensional frame structure, Boundary conditions, Static analysis of two dimensional frames.

UNIT-V:
Fixed offshore platform design: Field development and concept selection activities- Estimation of wave loading on a structural element using linear wave theory on small bodies, Development of mathematical model with constraints, Development of global stiffness matrix of a simple two dimensional fixed offshore structure, static analysis of a simple two dimensional fixed offshore structure, Development of MAT lab coding for the analysis of a simple two dimensional fixed offshore structure.
UNIT-VI:
Floating offshore platform design: Introduction - Floating platform types- Hydrostatic analysis of floating system with examples, Different types of anchoring systems (taut and catenary mooring), Installation of different offshore structures (Jacket, Spar, Tension leg platform, semi-submersible and Floating Production Storage and offloading systems).

Outcomes:
The students will be able to:
- Identify type of offshore structure and recommend a specific offshore structure for a given site condition and requirements of the platform.
- Estimate water particle kinematics using linear Airy’s wave theory and estimate maximum wave force and overturning moment for a fixed vertical circular cylinder.
- Do analysis and design of fixed offshore structure.
- Perform mass distribution of different structures such as floating structure, TLP and Spar.

Text Books:

Reference Book:
RESERVOIR STIMULATION
(ELECTIVE-II)

Learning Objectives: To impart knowledge in

- Basic concepts of rock mechanics and their relevance to design stimulation task in a petroleum reservoir.
- Development and analysis of Simple 2D, Pseudo 3D and Real 3D analytical models to represent hydraulic fracturing.
- Working knowledge of fracturing fluids and their additives.
- Working knowledge of the rheology of fracturing fluids and their properties.
- Data requirements for the design of a fracturing task.
- Pressure decline analysis and interpretation techniques.
- Practical limitations in fracture design.
- Prediction of fracture height and various approaches for post-treatment measurements.
- Evaluation of post treatment and performance of fractured wells.

UNIT-I:
Elements of rock mechanics: Basic concepts- Pertinent rock properties and their measurement- In-Situ stress and its determination.

UNIT-II:

UNIT-III:
Fracturing fluid proppant and characterization: Rheology- Shear and temperature effects on fluid properties- Foam fracturing fluids- Slurry rheology- Proppant transport- Fluid loss- Formation and fracture damage- Proppants.
Pre-Treatment data requirements: Types of data- Sources of data- Dynamic downhole testing.

UNIT-IV:
Fracturing diagnosis using pressure analysis: Basic relations- Pressure during pumping- Analysis during closure- Combined analysis pumping and closure- Field procedures.
The optimization of propped fracture treatments: Physical systems and mathematical formulations- Treatment optimization design procedure- Parametric studies of fracture design variables.

UNIT-V:
Considerations in fracture design: Size limitations- Considerations with predetermined size or volume- Benefits of high proppant concentrations- Effect of reservoir properties- Effects of perforations on fracture execution.
Fracture-Height predictions and post-treatment measurements: Linear fracture-mechanics modeling for fracture height- Fracture-height prediction procedures- Techniques to measure fracture height.

UNIT-VI:  
Post-treatment evaluation and fractured well performance: Selected references before the finite conductivity fracture models- Cinco and Samaniego model- Comments on damaged and chocked fractures- Post-fracture well analysis- Interpretation for finite conductivity fracture wells with wellbore storage- Comparison of production forecasts for untreated and fractured wells- Calculation of the fracture length and conductivity of long-flowing wells.

Outcomes:  
The students will be able to:
- Gain working knowledge of various approaches of fracturing approaches.
- Assimilate data for the design of stimulating treatment.
- Design and analyze fracturing approaches for petroleum reservoir stimulation.
- Solve practical problems in reservoir fracturing and remedies to resolve the same.

Text Book:

Reference Books:
INTELLECTUAL PROPERTY RIGHTS AND PATENTS

Learning Objectives:
- To know the importance of Intellectual property rights, which plays a vital role in advanced Technical and Scientific disciplines.
- Imparting IPR protections and regulations for further advancement, so that the students can familiarize with the latest developments.

UNIT-I:

UNIT-II:

UNIT-III:

UNIT-IV:

UNIT-V:
UNIT-VI:

- Relevant Cases Shall be dealt where ever necessary.

Outcomes:
- IPR Laws and patents pave the way for innovative ideas which are instrumental for inventions to seek Patents.
- Student gets an insight on Copyrights, Patents and Software patents which are instrumental for further advancements.

Reference Books:
6. Cyber Law - Texts & Cases, South-Western’s Special Topics Collections.

PETROLEUM EQUIPMENT DESIGN & SIMULATION LAB

Learning Objectives:
The student will be trained in the design and simulation of various equipment used in petroleum industry.

The following experiments have to be conducted using C/C++/Simulink using MATLAB/UNISIM for design and simulation:

1. Oil- Water separator.
2. Gas- Oil-Water separator.
3. Lean / rich amine heat exchanger.
4. Air cooled heat exchanger.
5. CO₂ and H₂S absorber unit using, MEA/DEA amine solution.
6. Stripping unit.
7. Single stage flash vaporization unit.
8. Three stage flash vaporization unit.
10. Gas Compressor unit.

Outcomes:
The student shall be able to carry-out the following tasks independently:

- Design and simulation of the two-phase and three phase separators.
- Design and simulation of compressors.
- Design and simulation of flash vaporization units.
- Design and simulation of absorber-stripper unit for removal of CO₂ and H₂S from natural gas.
- Size /rate the pipeline & pumping systems for liquid pumping & simulate water hammer conditions.
- Carryout detailed thermal sizing or rating of shell & tube exchangers as per TEMA specifications and API guidelines.
- Generate sized equipment data sheets as per the industry standards with required information for detailed design / manufacture.
Learning Objectives:

- The main objective is to simulate the exploitation of a real reservoir without the costs of real life trial and error, e.g. to test different production scenarios to find an optimal one before the reservoir is actually put on production.
- To develop reservoir simulation models for new reservoirs to maximize recovery of oil and gas and to make investment decisions.
- To develop reservoir simulation models for existing reservoirs to study production decline and production forecasts.

Reservoir Simulation Experiments:

The students will be trained in the software Package ECLIPSE, or any other equivalent software to model and solve reservoir engineering problems.

1. File organization and structure
2. Selection of suitable by grid sensitivity studies.
3. Fluid properties
4. Rock properties
5. Wells
6. Aquifer modeling
7. History matching consisting of adjusting the parameters of the model such as permeability, porosity etc. until the computed results for the historical period are close to historical data
8. Prediction of properties permeability, relative permeability, saturation etc.

Outcomes:

After the laboratory course, the students will be able to:

- Explain reservoir simulation fundamentals- the underlying equations and the numerical techniques used to solve them.
- Design a reservoir simulation model, construct the data set, execute the simulator, and view simulation results visually using post-processing software.
- Plan and conduct the calibration of a reservoir simulation model.
- Apply reservoir simulation technology to solve production and reservoir engineering problems in individual wells or patterns.
- Apply reservoir simulation technology to solve production and reservoir engineering problems in entire fields or reservoirs.
- Present results of an engineering study effectively in a written report.
ENHANCED OIL RECOVERY TECHNIQUES

Learning Objectives:

- Understanding of secondary / tertiary recovery of crude oils of specific reservoirs.
- Following the selection criteria to which reservoir suits for specific EOR techniques.
- Post project monitoring.
- Knowledge of maintenance of injection wells / Production wells.
- Knowledge of ignition of injection wells in case of thermal EORs.
- Knowledge of handling of chemicals like CO\(_2\), Surfactants, Polymers etc.
- Handling of injection wells in case of any leakage or blowout situations.

UNIT-I:
Introduction: Secondary oil recovery processes, Selection of lift mechanism for wells, Gas lift methods continuous & intermittent gas lift valve designs, Sucker rod pumping units parts of pumping unit, design operation maintenance, Electrical submersible pumps design operation maintenance.

UNIT-II:
Miscible flooding: Introduction, Sweep efficiency-High pressure gas injection, Enriched gas drive, LPG slug drive; Predictive technique, Field applications.

UNIT-III:
Polymer flooding: Introduction, Polymer products and theory of use, Planning polymer flood projects.
Polyacrylamides: Introduction, Polyacrylamides chemistry, Application of PAM/AA in enhanced oil recovery, Factors affecting flow in porous media, Field considerations- Site factors, Field operation.

UNIT-IV:
Alkaline flooding: Introduction, Types of caustic used, Entrapment of residue oil, Displacement mechanisms in alkaline flooding, Crude oil properties, Alkali consumption, pH of injected caustic, Effect of sodium ions and sodium chloride, Effect of divalent ions, Reservoir selection-Documented alkaline flooding field’s tests.
Surfactants flooding: Introduction, Classification of EOR surfactants, Mechanism of oil displacement by surfactant flooding, Ultra low interfacial tension in relation to oil displacement by surfactant flooding, Factors influencing oil recovery, Surfactant gas flooding for oil recovery, Interfacial phenomena in surfactant gas flooding, Mechanism of surfactant loss in porous media, Present status of the use of surfactants in oil recovery.

UNIT-V:
Steam flooding for enhanced oil recovery: Introduction, Theory- Screening criteria for steam flood prospects, Reservoir rock and fluid properties, heat losses and formation heating, Oil recovery calculations, An overview of steamflood modeling, Parametric studies in steam flooding, Economics of the steam flooding process.

In-situ combustion technology: Introduction, Reservoir characteristics, Ignition-Ignition methods, Process In-situ Combustion, Use of In-situ Combustion, Conclusions, Current status of In-situ Combustion.

UNIT-VI:
Microbial enhanced oil recovery: Microorganisms, Historical development of microbial enhancement of oil recovery, Laboratory experiments show the potential of microbial enhancement oil recovery, Field application of microbial enhancement of oil recovery, Microbes associated with oilfield problems, Microbial interactions with produced oil, Potential of microbial enhancement of oil recovery, Injection of cells and spores.

Outcomes: The students can
- Have the knowledge of that specific reservoir before designing of any EOR project.
- Be a very good team members in the multidiscipline team where key decisions can be taken in this project work.
- Be a very good operator and maintenance engineer of EOR techniques.
- Take all safety precautions while handling of various types of chemicals used in EOR.
- Become good reservoir managers / production engineers in monitoring the reservoir after post project activities.
- Handle the wells during work over operations.

Text Books:

Reference Books:
HSE & FE IN PETROLEUM INDUSTRY

Learning Objectives:
- Knowledge of environment issues and all related Acts.
- Knowledge of drilling fluids and its toxic effects with environment.
- Proper disposal of drilling cutting after appropriate treatment.
- Treatment of produced water and makeup water and its disposal as per state pollution control board norms.
- Knowledge of oil mines regulations and proper implementation in drilling & production mines as per Act.
- Knowledge of Hazop in drilling rigs & production installations.
- Knowledge of disaster management to fight any fire accident at drilling rig/production installation/production platform.

UNIT-I:
Introduction to environmental control in the petroleum industry: Overview of environmental issues- A new attitude.
Drilling and production operations: Drilling- Production- Air emissions.

UNIT-II:
Environmental transport of petroleum wastes: Surface paths- Subsurface paths- Atmospheric paths, Planning for environmental protection.

UNIT-III:
Oil mines regulations: Introduction-Returns, Notices and plans- Inspector, management and duties- Drilling and workover- Production- Transport by pipelines- Protection against gases and fires- Machinery, plants and equipment- General safety provisions- Miscellaneous-Remediation of contaminated sites- Site assessment-Remediation process.

UNIT-IV:
Toxicity, physiological, asphyxiation, respiratory, skin effect of petroleum hydrocarbons and their mixture- Sour gases with their threshold limits- Guidelines for occupational health monitoring in oil and gas industry. Corrosion in petroleum industry- Additives during acidizing, sand control and fracturing.
UNIT-V:
Hazard identification- Hazard evaluation- Hazop and what if reviews- Developing a safe process and safety management- Personal protection systems and measures.
Guidelines on internal safety audits (procedures and checklist) - Inspection & Safe practices during electrical installations- Safety instrumentation for process system in hydrocarbon industry- Safety aspects in functional training-Work permit systems.

UNIT-VI:
Classification of fires- The fire triangle- Distinction between fires and explosions- Flammability characteristics of liquids and vapors- Well blowout fires and their control- Fire fight equipment- Suppression of hydrocarbons fires.

Outcomes: The students will be able to:
• Be conversant with the knowledge of various Acts related to safety, Health and environment in petroleum industry.
• Have the knowledge of various drilling fluids handling and safe disposal such toxic products.
• Gain Knowledge of disaster management to fight any crisis.
• Apply Hazop to petroleum equipment operation and assess risk involved
• Mitigate occupational health hazards in the industry.

Text Books:

Reference Books:
PETROLEUM ECONOMICS, POLICIES & REGULATIONS

Learning Objectives:

• Understand the importance of petroleum sector in the world economy, both the macro and micro-economic environment and as applicable to India.
• Understand the commercial aspect and capital budgeting and capital efficiency related to the oil and gas industry value chain from exploration to consumers.
• Carry out a project risk evaluation, breakeven and sensitivity analysis and develop a model to know which petroleum projects is viable and relative priority.
• Understand geopolitical risks and opportunities and hedging strategies to mitigate market and price risks.
• Understand the regulations regarding refining, processing, storage, transportation distribution, marketing & sale of petroleum products.
• To have an overview of the regulatory frame related to exploration as per NELP.

UNIT-I:
Macro-Economic Approach of Petroleum Industry: Political environment related to petroleum industry and issues related to government and corporate interests, Need for understanding petroleum economics required to make investment decisions; Introduction, Role and value of Oil & Gas, Evolution of national oil companies, Organization of petroleum exporting countries.

UNIT-II:
Principles, Methods and Techniques of Petroleum Engineering Economics: Introduction, outline and key terminologies and generic issues of micro-economic analysis applicable to all sectors of the oil and gas supply chain, Capital budgeting and capital efficiency, Sources of revenue and cost and profitability analysis, Operating expenditures (opex) and their fixed, variable and marginal components, Economic indicators and yardsticks used to rank asset values (NPV, IRR, etc.)

UNIT-III:
Managing and Mitigating Uncertainty and Risk: Risk, uncertainty and decision analysis, Analysis of alternative selections and replacements, Managing and Mitigating uncertainty and Risk-Breakeven and sensitivity analysis, Optimization Techniques, Geopolitical risks and opportunities and hedging strategies to mitigate market and price risks, Asset valuation process: fair market value, probability and risk.

UNIT-IV:
Application and Project Evaluation: Project lifecycles, optimum economic life and multi-year cash flows, Oil fields exploration and drilling operations, Oil fields’ estimation of oil reserves and evaluation of an oil property, Project financial analysis, Project development and Joint development utilization oil fields production operations, Oil transportation, Crude oil processing.
UNIT-V:

Demand and Marketing of Petroleum Products: Crude oil fundamentals, Price of crude, Crude oil prices in transactions, Internal Markets and Prices, Marketing and sale of Motor, Aviation, Lubricant, Asphalt and Propane;. Transportation: Fundamentals of transportation, Pipelines, Oil tankers, Downstream transportations, Distribution of petroleum products.

UNIT-VI:
Petroleum or Oil & Gas Policies and Regulations: Petroleum and Oil & Gas rules and regulations in India, The Oil fields regulations and development Act, New Exploration Licensing Policy (NELP), Functions of directorate general of hydrocarbons, Petroleum and Natural Gas Regulatory Board.

Outcomes:
On completion of the course the students should be able to:
- Explain the inter-relations between Oil industry petroleum sector and its impact on national and global economy.
- Evaluate a strategic policy framework of a firm and comment on its relative position within the industry.
- Develop the capability to analyze the global oil and gas industry, focusing on its strategic, economic and fiscal position.
- Demonstrate decision making skills in analyzing basic financial results related to petroleum industry.
- Capable of analyzing the petroleum industry involving pricing, risk profiling, optimization and profitability choosing appropriate techniques.
- Develop generic marketing plans for petroleum products downstream.
- Understand and apply the regulatory framework and related to petroleum industry in the area of licensing and exploration.

Text Books:

Reference books:
(The instructor can download information required from internet to teach the topics in UNIT VI).
Leaning Objectives:

- To understand the global significance and distribution of shale gas reservoirs
- To gain knowledge in petro-physical properties, pore pressure prediction, performance analysis, production and testing of shale gas reservoirs.
- To study gas shale asset life cycle and environmental issues and challenges.

UNIT-I:

UNIT-II:
Sequence stratigraphy of unconventional resource shales – Pore Geometry in gas shale reservoirs.
Petro-physical evaluation of gas shale reservoirs.

UNIT-III:
Pore pressure prediction of shale formations using well log data: Overpressure generating mechanisms – Overpressure estimation methods – Role of tectonic activity on shale pore pressure – Geo-mechanics of gas shales.

UNIT-IV:

UNIT-V:

UNIT-VI:
Outcomes:

- With the knowledge gained on the different aspects of shale gas reservoirs such as organic geo-chemistry, mineralogy, petrophysical properties, geomechanics, reservoir engineering, the students will be able to evaluate and map shale gas pockets in sedimentary basins. Further, they will be able to devise the production mechanisms to extract shale gas.
- Knowing the shale gas environmental issues and challenges such as high water demands and ground water contamination risks posed by hydro-fracturing fluids and waste, the students will be able to address these problems during the exploration of shale gas reservoirs.

Text Book:

Reference Book:
SUBSEA ENGINEERING  
(ELECTIVE-III)

Learning Objectives:
- To understand the subsea development operations.
- To learn the hydraulic / equipment / system design considerations.
- To learn the process control and power supply consideration.
- To understand the reliability issues & design challenges involving subsea systems.

UNIT-I:

UNIT-II:
**Subsea Distribution System:** Introduction – Design Parameters – SDS component design requirements.

**Installation & Vessels:** Introduction – Typical installation vessels – Vessel requirements & selection – Installation positioning & Analysis.

UNIT-III:

**Subsea Power Supply:** Introduction – Electrical power system – Hydraulic power system.

UNIT-IV:
**Subsea System Engineering:** Introduction – Typical flow assurance process - System design & Operability.

UNIT-V:

UNIT-VI:

Outcomes: The students will be able to:
- Do flow assurance calculations and size the piping & distribution system.
- Deliver the equipment & system design required for a given subsea project requirement.
- Anticipate reliability issues such as hydrate, wax formation, corrosion etc. during design.

Text Books:
3. Manual on Subsea Technology, IOGPT, ONGC.
RESERVOIR MODELING & SIMULATION  
(ELECTIVE-III)

Learning Objectives:

• Theoretical and working knowledge of reservoir simulation models of varying complexities:
  i. Single-phase fluid equations in multiple dimensions
  ii. Volume finite difference approaches
  iii. Block centered grids
  iv. Point distributed grids
  v. Well representation

• Applicable numerical methods for the solution of simple and complex reservoir simulation models. Emphasis shall be towards the general approaches such as direct solution and iterative solution methods.

• Parametric analysis of reservoir simulation models.

UNIT-I:
Introduction: Milestones for the engineering approach-Importance of the engineering and mathematical approaches.

UNIT-II:

UNIT-III:

UNIT-IV:

UNIT-V:
Well representation in simulators: Introduction- Single block wells- Multi block wells-Practical considerations dealing with modeling and well conditions.

Single-phase flow equations for various fluids: Pressure dependence of fluid and rock properties-General single-phase flow equation in multi dimensions.
UNIT-VI:

**Linearization of flow equation:** Introduction- Nonlinear terms in flow equations- Nonlinearity of flow equations for various fluids- Linearization of nonlinear terms- Linearized flow equations in time.

**Methods of solution of linear equations:** Direct solution methods- Iterative solution methods.

**Outcomes:**
For a given reservoir characterization and assumed geometry, the students with good knowledge of this course shall be able to carry the following tasks:

- Develop a simple mathematical model to represent the reservoir production capabilities using mathematics and fundamentals of fluid flow.
- Enhance the complexity of mathematical model to represent realistic reservoir conditions
- Working knowledge of model solution approaches using mathematical rules such as linearization.
- Parametric case studies and remedies to bypass numerical instabilities and stiff formulations.

**Text Book:**

**Reference Books:**
Learning Objectives:

- To give a clear, organized and accurate oral presentation of Summer Training Report.
- To provide verbally/through power point presentation of condensed large amounts of technical information into concise, condensed analysis.
- Sharing the practical knowledge obtained during training with fellow students.

The presentation and evaluation of the summer training report for 50 marks should be conducted by a committee constituted by the University.

Outcomes:
The students will extend their abilities to:

- Get themselves good clarity in the technical topics being presented.
- Develop good communication skills.
- Practice the behaviors of effective speakers.
- Assess strengths in speaking and set goals for future growth.
Learning Objectives:
The students are guided to learn the following aspects:

- Understanding & evaluating the design / operation / environmental aspects of a petroleum equipment/ process.
- Understanding & evaluating the technology aspects of various alternatives available, called “Best Available Technologies (BAT)”, through literature & references and select a suitable equipment/ process with optimum capacity.
- Carrying-out the basic design of the process using steady state simulation.
- Preparation of equipment layout & plot plan drawing.
- Preliminary cost estimation of CAPEX and OPEX.
- Presentation & project management skills.

The project work may consist of any one of the following:

a) The project work should consist of a comprehensive design project of any one of the petroleum upstream processes concerned with reservoir, drilling, production, surface production operations, stimulation, enhanced oil recovery in the form of a report.

b) Modeling & Simulation of any petroleum upstream unit concerned with reservoir, drilling, production, surface production operations, stimulation, enhanced oil recovery.

c) Any experimental work with physical interpretations.

Outcomes:
The student shall be able to carry out independently the following tasks:

- Preparation of project feasibility reports for petroleum processes/plants.
- Gather & use various sources such as market data, literature, customer feedbacks etc. to evaluate the Best Available Technologies in the market and select suitable process meeting the site conditions, environmental regulations, product quality etc.
- Simulation of overall plant including estimation of utility consumptions.
- Generation of equipment diagrams and MSD (Material Selection Diagrams).
- Sizing of all plant equipment and preliminary cost estimation using cost indexes, charts & literature.
- Preliminary cost estimation of piping, instrumentation, electrical equipment, civil works & construction as % of equipment cost, to determine Installation cost of the equipment/plant.
- Preliminary utility & chemical consumption estimation and using this data estimating the operating cost.
- Manage a comprehensive project in a planned manner, within specified time and present the salient features of the result to the audience with confidence and clarity.
